---

Oh man. Tonight will be even more exciting. We are deploying the new firewall in mitc which is requiring changes to all the other datacenter's firewalls too. Hold onto your hat.

Given the reaction firefox had to the cert revoke. I doubt anyone could log in from sometime between 5pm and 1:30 AM. So, "readonly" was the effect most of the evening.

Btw, have you noticed all the pdf/abuse emails? I'm seeing a much higher pdf download rate.

The PDF download activity has actually increased since 6pm now.

 Image

see the lighter red line.

Actually, MIT is the heaviest hitter right now for pdf hits with this ip: 18.55.6.215.

On Sep 25, 2010, at 7:29 PM, [REDACTED] wrote:

Any chance the offending scraper has an IP from the Portland area? We had a tool from Portland State University apologize and admit he was using 3+ PCs to mass download after they went to his house and punched him in the face (if only).

While Ann Arbor is much better than before, servers still have stuck threads and high load averages. I am doing a rolling restart of Ann Arbor in hopes that it will help clear this up. The trouble might just come right back though.

Any chance the offending scraper has an IP from the Portland area? We had a tool from Portland State University apologize and admit he was using 3+ PCs to mass download after they went to his house and punched him in the face (if only).

The PDF download activity has actually increased since 6pm now.

 Image

see the lighter red line.

Actually, MIT is the heaviest hitter right now for pdf hits with this ip: 18.55.6.215.

No sweat, I have been testing and forms are low volume but arriving. We should talk at some point about special circumstances like when the site suffers badly (like tonight between 6-6:45) historically, the restarts and jacking around of the servers to get it back up have caused some issues re: the Talisma email extraction.

I understand the need to have some framework around on call hours, but if [REDACTED] and myself are up at all hours making sure things get back on track, we are likely to need some commitment from the [REDACTED] for these moments of trauma, especially with the pending SLAs for CSP publishers. For tonight, we're good.

Fair enough. Do we know roughly how many sessions off hand? If it takes digging, please don't, there is time to review later. My concern about sessions is, as always, related to proxy. If we set the limit to even 20 sessions in 5 minutes (a very low threshold I would guess), wouldn't these tools just stagger the session creation to adjust? Of course, it would also inadvertently catch our very larges pretty quickly I'd guess.

Indeed; some champs like [REDACTED] have over 1000 threads stuck there, while others have more like 50 or so.

Someday I'd like to have a month where we don't run into a thread pileup in this fine piece of software.

They are blocked at the firewall now and the scraper is also blocked. We will need to involve [REDACTED] and [REDACTED] to enable them again when MIT can assure us they have the situation resolved.

Thank you [REDACTED] and [REDACTED] for patching us up!

Actually, we're still getting hit heavily, but the bad guys aren't getting PDFs anymore. Just "go away" messages. So we should leave the blocking on.

scraper is back on 18.55.6.216 since 8am. Still MIT's network range -- which is 18.0.0.0/8 I guess.

And just because [REDACTED] taunted it, a few minutes later the servers got all complainy for 20-30 minutes.

Maybe they'll do it yet again tomorrow at the same time, just to prevent us from being able to leave work for dinner.

By the way, I have a class on Wednesday evenings for the next 6 weeks, and I \*will\* be leaving work on time to go to it. You hear that, Literatum? Get your worst stuff ready!

And just because [REDACTED] taunted it, a few minutes later the servers got all complainy for 20-30 minutes.

Maybe they'll do it yet again tomorrow at the same time, just to prevent us from being able to leave work for dinner.

By the way, I have a class on Wednesday evenings for the next 6 weeks, and I \*will\* be leaving work on time to go to it. You hear that, Literatum? Get your worst stuff ready!

So far blocking the class C net has kept the scraper at bay. MIT has an entire class A so the whole range for MIT is actually quite large :): 18.0.0.0/8.

Hopefully everything you need to communicate to MIT is in this thread.

Also, I bet this may not be the last script kiddie to figure out that we only limit the pdfs downloaded per session and that we don't limit sessions this fall. We may want to plan out what we need to enable the existing session limit controls literatum provides.

Hello [REDACTED]

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

Hi [REDACTED]

Yes, I was glad to be mistaken about the Class A range. That said, note that this was an extreme case. We typically suspend just one individual IP at a time and do that relatively infrequently (perhaps 6 on a busy day, from 7000+ institutional subscribers). In this case, we saw a performance hit on the live site, which I have only seen about 3 or 4 times in my 5 years here.

The pattern used was to create a new session for each PDF download or every few, which was terribly efficient, but not terribly subtle. In the end, we saw over 200K sessions in one hour's time during the peak. We have implemented some multiple session creation limits that will not be affected even by our heaviest users, but will catch this kind of extreme case and truncate the activity much sooner going forward.

That said, I can confirm that we will continue to take the least intrusive and most measured approach to addressing excessive use whenever possible, and a Class C range is the most we have blocked at once in my tenure. I have no reason to believe we would need to be more heavy handed than that, but, of course it is possible that it might be warranted at some point. I highly doubt it.

Thanks,

[REDACTED] thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Hey [REDACTED],

Can you give [REDACTED] the go ahead to unblock the MIT Class C range at [REDACTED] earliest convenience?

Thanks,

[REDACTED]

Hello [REDACTED],

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

[REDACTED]

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear ██████████,

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

██████████

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

**Subject:** RE: JSTOR Abuse at MIT: All IPs Blocked

---

Hi [REDACTED],

Yes, I was glad to be mistaken about the Class A range. That said, note that this was an extreme case. We typically suspend just one individual IP at a time and do that relatively infrequently (perhaps 6 on a busy day, from 7000+ institutional subscribers). In this case, we saw a performance hit on the live site, which I have only seen about 3 or 4 times in my 5 years here.

The pattern used was to create a new session for each PDF download or every few, which was terribly efficient, but not terribly subtle. In the end, we saw over 200K sessions in one hour's time during the peak. We have implemented some multiple session creation limits that will not be affected even by our heaviest users, but will catch this kind of extreme case and truncate the activity much sooner going forward.

That said, I can confirm that we will continue to take the least intrusive and most measured approach to addressing excessive use whenever possible, and a Class C range is the most we have blocked at once in my tenure. I have no reason to believe we would need to be more heavy handed than that, but, of course it is possible that it might be warranted at some point. I highly doubt it.

Thanks,

[REDACTED]

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear ,

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

JSTOR

Sorry to be so late to the party. I'll be in touch with MIT directly. Note that they reported a visiting scholar responsible for the first incident. Once we get a report on this incident from them, if it happens again, we should do a deeper think about them and what is really going on here.

Also, after the last incident, we implemented the Literaturum Abuse Tools to block when 5000 sessions are created from the same IP in a 60 minute period. Once we're settled, can we see if that did or did not work as expected?

[REDACTED] has completed the ip block and I'm now seeing it deny the abusive traffic. Also, there is a new GSS rule to lock 18.0.0.0/8 to [REDACTED] -- so, we can use them for whatever testing we want -- their punishment is to be sent to guinea-pigdom.

I'm rolling restarting the servers in [REDACTED] that got locked up in [REDACTED] access log synchronization nonsense.

If the session limit in literatum was actually on then it didn't do a thing. I bet it's on a "per server" basis and not for an entire datacenter. We might need to bring that up with Atypon.

Given the size of pdfs, I am serious about setting an all out bandwidth limit for that net on the firewall if it's possible technically.

They were using about 50mb of bandwidth for a good part of Saturday. So, if we limit the whole thing to 1-5mb that should keep the problem on their side rather than ours. They'll run out of bits before we start to have site problems. Though, that abuse appliance [REDACTED] was talking about after last time sounds much effective than thi\$ idea ;).

---

Good Evening,

I want to make you aware that the MIT abuse case that showed up 3 weeks ago came back today, forcing [REDACTED] to deny 18.0.0.0/8 at the firewall. Half of Manchester needed restarting this afternoon to address servers that got jammed up due to this activity. I have emailed our contacts at MIT and informed them of the situation.

Just for clarity, that's the whole range, the largest we have ever denied. Last time they reported that a visiting scholar was responsible and that it should not recur as the scholar had left.

I am in conversation with [REDACTED] and [REDACTED] is reporting that this scraping is very intensive and threatening the website when unblocked. The block of their range has brought the incident under control and they are currently getting deny pages and not threatening the website.

The pattern is simple... they start a session, download 1 pdf, start a new session, download 1 pdf on and on. [REDACTED] can comment on the specific volume and duration.

Also, after the last incident at MIT, we implemented Literatum's # of sessions per hour IP blocking rule to 5000 sessions in 60 minutes. It did not fire. We are digging deeper, but the earliest speculation is that this rule is applied 'per server', which we did not anticipate, meaning we'll need to adjust the number down based on data gathered from this incident and elsewhere.

I don't know if this will cause any negative reaction in the public and haven't heard anything through our feedback channels as yet, but wanted to make sure we were all on the same page and that there are no surprises here. This is an extreme block to combat an extreme attack.

More as the situation gets resolved.

Best,

[REDACTED]

Subject: Extreme robotic activity of JSTOR at MIT

Dear [REDACTED]

I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Our staff have communicated with your staff and will be working to get MIT access back up just as soon as possible.

I'll keep you posted as I hear more.  
Best regards,

[REDACTED]

Thanks, [REDACTED] Very troubling.

Also, this is the first I've heard of this. [REDACTED] needs to be involved earlier in these types of matters to ensure we adhere to contract terms and pursue appropriate remedies. This is part of the protocol we established. The activity noted is outright theft and may merit a call with university counsel, and even the local police, to ensure not only that the activity has stopped but that -- e.g. the visiting scholar who left -- isn't leaving with a hard drive containing our database.

[REDACTED] please clarify the history of this activity. What happened 3 weeks ago? How did we respond? What has happened in the intervening time?

And what is the "last time" incident with the visiting scholar? Is this the one from three weeks ago? Again, this is the first I've heard of this. Going forward, we need to make sure [REDACTED] is aware of these cases as they are emerging. The [REDACTED] component is critical here, but there are other avenues that often need to be pursued concurrently.

Thanks [REDACTED]

Just to clarify at the outset, the 1<sup>st</sup> incident that happened 2 weeks ago (9/25 – 9/26) was the same incident they reported a visiting scholar responsible for, the 2<sup>nd</sup> incident started yesterday. I was mistaken, It was not 3 weeks ago, it was 2 weeks.

The 1<sup>st</sup> incident was excessive, but seen as one off and part of the normal abuse protocols. Robot being used, IP access being denied, institution being responsive and asserting they had taken care of it. We have any number of these on a weekly basis, but to the tune of a few hundred PDFs per case. This was to the tune of several thousand from what I understand.

I recognize that this is not an ordinary case and I should have looped you in on it at the time, that was poor judgment on my part. I'll be sure to do so going forward. At the time, [REDACTED] was satisfied with the response, as was I, and the activity did not recur. It was seen as an efficient robot, but not special, just using a new patter and with access to fantastic bandwidth through MIT. Definitely not any kind of denial of service attack.

Basically, when you apply limits based on session as we have, the natural progression is to adjust the pattern, one of which is to simply start new sessions more frequently.

[REDACTED] and I discussed this very pattern last year when abuse protocols were first put in place. The only weapon we have against it, based on the pattern, is some version of CAPTCHA, requiring entry for the 1<sup>st</sup> download of every session and once again, randomly, every N downloads. This would prevent this particular kind of scripting. My opinion on that is that if these are isolated incidents, that barrier is too high for the regular user. [REDACTED] may not feel that way. From my perspective MIT is a special case and the first of this kind of scripting we have seen on any scale and the first to threaten the live site with its efficiency. They will likely be embarrassed that this has recurred.

It is also not clear to me if they were scraping the site heavily for metadata, stable URLs, downloading PDFs or all of the above. We are adjusting the abuse tools down to try and auto-prevent, but we need precise data in order to both prevent this kind of abuse pattern and not disrupt normal use elsewhere. To that end I will ask [REDACTED] and [REDACTED] to provide a recap of the incident and the numbers surrounding it as they never hit our abuse monitoring rules the 1<sup>st</sup> or 2<sup>nd</sup> time, I have no window into the numbers themselves.

The second occurrence, as it stands, started at some point yesterday, but I am unclear as to when that was. The [REDACTED] summary will give us that.

As for the timeline to this point, [REDACTED] began communicating broadly about it shortly before 6 pm yesterday and the IP range was denied around 6:45 pm. I first saw the email chain from [REDACTED] around 8:30 pm and began communicating to MIT, [REDACTED] around 9 pm. MIT has not responded and the IPs will remain blocked until they do.

I will be sure to keep you both looped in as progress is made against both resolving this issue and providing a summary report.

**Subject:** RE: MIT is currently denied JSTOR Access

---

Thanks for this background, [REDACTED] A few thoughts for all of us:

1. I'd like us to think about ramping up how we deal with piracy-as-industrial-theft on a case-by-case basis. [REDACTED] is doing its job in monitoring and modifying thresholds as needed, and [REDACTED] is reaching out to librarians (fyi, [REDACTED] et al. should be alerted as well). But, in some instances, it may not be enough to learn that "the activity has stopped". Where is the content that was downloaded living? Has the institution ensured that it's not on someone's hard drive that will go back to, say, China? In our agreement with institutions, they commit to being cooperative with us in dealing with matters of abuse, and we may want to pursue this more aggressively. If someone is downloading 1000s of articles (what seems like a reasonable threshold for us to take action), what's wrong with us – or the university in collaboration with us -- alerting the cyber-crimes division of law enforcement and initiating an investigation, having a cop search a dorm room and try to retrieve any hard drive that contains our content, etc. Our content is extraordinarily valuable and hard to replicate by the sweat of one's brow, but can be duplicated by savvy hackers, and who knows what they want to do with the content (we've already witnessed an interested in pirating our content from senior university officials in China....). So, beginning with this instance, I'd like us to think about this. One step at a time, I realize, but I would like to be in touch with university officials and with this group or others as needed think about initiating some form of law enforcement investigation.
2. Are we prepared to create an alt method for MIT users to make use of the database while this is being resolved? It's a big deal as we know to shut down a whole university (and do we know why they'd have only one OP address vs. a range). Can we offer limited password access (heavy duty admin work for us) or some other mechanisms so that we don't lose good will here.
3. Is there a way for a notice to go out or be posted on the MIT library site making it clear that we are down as a result of extreme hacking by someone in the MIT community. Otherwise users won't know this and will think we're unreliable.....

[REDACTED] and I discussed this very pattern last year when abuse protocols were first put in place. The only weapon we have against it, based on the pattern, is some version of CAPTCHA, requiring entry for the 1<sup>st</sup> download of every session and once again, randomly, every N downloads. This would prevent this particular kind of scripting. My opinion on that is that if these are isolated incidents, that barrier is too high for the regular user. [REDACTED] may not feel that way. From my perspective MIT is a special case and the first of this kind of scripting we have seen on any scale and the first to threaten the live site with its efficiency. They will likely be embarrassed that this has recurred.

It is also not clear to me if they were scraping the site heavily for metadata, stable URLs, downloading PDFs or all of the above. We are adjusting the abuse tools down to try and auto-prevent, but we need precise data in order to both prevent this kind of abuse pattern and not disrupt normal use elsewhere. To that end I will ask [REDACTED] and [REDACTED] to provide a recap of the incident and the numbers surrounding it as they never hit our abuse monitoring rules the 1<sup>st</sup> or 2<sup>nd</sup> time, I have no window into the numbers themselves.

The second occurrence, as it stands, started at some point yesterday, but I am unclear as to when that was. The [REDACTED] summary will give us that.

As for the timeline to this point, [REDACTED] began communicating broadly about it shortly before 6 pm yesterday and the IP range was denied around 6:45 pm. I first saw the email chain from [REDACTED] around 8:30 pm and began communicating to MIT, [REDACTED] and [REDACTED] around 9 pm. MIT has not responded and the IPs will remain blocked until they do.

I will be sure to keep you both looped in as progress is made against both resolving this issue and providing a summary report.

Thanks, [REDACTED] Very troubling.

Also, this is the first I've heard of this. [REDACTED] needs to be involved earlier in these types of matters to ensure we adhere to contract terms and pursue appropriate remedies. This is part of the protocol we established. The activity noted is outright theft and may merit a call with university counsel, and even the local police, to ensure not only that the activity has stopped but that -- e.g. the visiting scholar who left -- isn't leaving with a hard drive containing our database.

█████ please clarify the history of this activity. What happened 3 weeks ago? How did we respond? What has happened in the intervening time?

And what is the "last time" incident with the visiting scholar? Is this the one from three weeks ago? Again, this is the first I've heard of this. Going forward, we need to make sure █████ is aware of these cases as they are emerging. The █████ component is critical here, but there are other avenues that often need to be pursued concurrently.

**Subject:** MIT is currently denied JSTOR Access

Good Evening,

I want to make you aware that the MIT abuse case that showed up 3 weeks ago came back today, forcing █████ to deny 18.0.0.0/8 at the firewall. Half of Manchester needed restarting this afternoon to address servers that got jammed up due to this activity. I have emailed our contacts at MIT and informed them of the situation.

Just for clarity, that's the whole range, the largest we have ever denied. Last time they reported that a visiting scholar was responsible and that it should not recur as the scholar had left.

I am in conversation with █████ and █████ is reporting that this scraping is very intensive and threatening the website when unblocked. The block of their range has brought the incident under control and they are currently getting deny pages and not threatening the website.

The pattern is simple... they start a session, download 1 pdf, start a new session, download 1 pdf on and on. █████ can comment on the specific volume and duration.

Also, after the last incident at MIT, we implemented Literatum's # of sessions per hour IP blocking rule to 5000 sessions in 60 minutes. It did not fire. We are digging deeper, but the earliest speculation is that this rule is applied 'per server', which we did not anticipate, meaning we'll need to adjust the number down based on data gathered from this incident and elsewhere.

I don't know if this will cause any negative reaction in the public and haven't heard anything through our feedback channels as yet, but wanted to make sure we were all on the same page and that there are no surprises here. This is an extreme block to combat an extreme attack.

More as the situation gets resolved.

Best,

[REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: MIT is currently denied JSTOR Access

Thanks for this background, [REDACTED] A few thoughts for all of us:

1. I'd like us to think about ramping up how we deal with piracy-as-industrial-theft on a case-by-case basis. [REDACTED] is doing its job in monitoring and modifying thresholds as needed, and [REDACTED] is reaching out to librarians (fyi, [REDACTED] et al. should be alerted as well). But, in some instances, it may not be enough to learn that "the activity has stopped". Where is the content that was downloaded living? Has the institution ensured that it's not on someone's hard drive that will go back to, say, China? In our agreement with institutions, they commit to being cooperative with us in dealing with matters of abuse, and we may want to pursue this more aggressively. If someone is downloading 1000s of articles (what seems like a reasonable threshold for us to take action), what's wrong with us – or the university in collaboration with us -- alerting the cyber-crimes division of law enforcement and initiating an investigation, having a cop search a dorm room and try to retrieve any hard drive that contains our content, etc. Our content is extraordinarily valuable and hard to replicate by the sweat of one's brow, but can be duplicated by savvy hackers, and who knows what they want to do with the content (we've already witnessed an interested in pirating our content from senior university officials in China....). So, beginning with this instance, I'd like us to think about this. One step at a time, I realize, but I would like to be in touch with university officials and with this group or others as needed think about initiating some form of law enforcement investigation.
2. Are we prepared to create an alt method for MIT users to make use of the database while this is being resolved? It's a big deal as we know to shut down a whole university (and do we know why they'd have only one OP address vs. a range). Can we offer limited password access (heavy duty admin work for us) or some other mechanisms so that we don't lose good will here.
3. Is there a way for a notice to go out or be posted on the MIT library site making it clear that we are down as a result of extreme hacking by someone in the MIT community. Otherwise users won't know this and will think we're unreliable....

Thanks [REDACTED]

Just to clarify at the outset, the 1<sup>st</sup> incident that happened 2 weeks ago (9/25 – 9/26) was the same incident they reported a visiting scholar responsible for, the 2<sup>nd</sup> incident started yesterday. I was mistaken, It was not 3 weeks ago, it was 2 weeks.

The 1<sup>st</sup> incident was excessive, but seen as one off and part of the normal abuse protocols. Robot being used, IP access being denied, institution being responsive and asserting they had taken care of it. We have any number of these on a weekly basis, but to the tune of a few hundred PDFs per case. This was to the tune of several thousand from what I understand.

I recognize that this is not an ordinary case and I should have looped you in on it at the time, that was poor judgment on my part. I'll be sure to do so going forward. At the time, [REDACTED] was satisfied with the response, as was I, and the activity did not recur. It was seen as an efficient robot, but not special, just using a new patter and with access to fantastic bandwidth through MIT. Definitely not any kind of denial of service attack.

Basically, when you apply limits based on session as we have, the natural progression is to adjust the pattern, one of which is to simply start new sessions more frequently.

[REDACTED] and I discussed this very pattern last year when abuse protocols were first put in place. The only weapon we have against it, based on the pattern, is some version of CAPTCHA, requiring entry for the 1<sup>st</sup> download of every session and once again, randomly, every N downloads. This would prevent this particular kind of scripting. My opinion on that is that if these are isolated incidents, that barrier is too high for the regular user. [REDACTED] may not feel that way. Hi [REDACTED]

I have spoken with [REDACTED] and [REDACTED] has started to gather the relevant data. To track progress against this request, I filed a JIRA ticket [OPS-1843](#) at [REDACTED] request.

Let me try and address each of these as best I can at present...

It is a good point to loop in [REDACTED] and [REDACTED] we usually do. I will do that shortly. The journals being downloaded will have to come from the [REDACTED] investigation.

1. Ramping up enforcement. This is certainly possible, but aside from the considerations about the PR of it all, there are a few road blocks. The primary one, as I see it, is that these users are almost always behind a proxy. This means that the Institution would have to dig through their logs to tell who the actual user was, requiring their cooperation. I don't know this area well, but my instinct is that institutions may not be inclined to do this willingly if prosecution of one of their students is on the other side. A second problematic piece is how to verify where the data went... cloud storage? portable storage devices? Again, I don't know this well, but I am guessing it would take a skilled techie to uncover the trail of the data, if the device(s) in use is/are locatable.
2. We can support an alternate access method at their request, but typically the blocking of their IPs is a strong signal and they could see the offering of a UN/PW as unusable on their end. That said, we can do it. I'll also have a look to see what we might do via referring URL or a more scaled solution if we decide to go that route. I must say I am little reluctant to offer an olive branch at this point. I am slightly concerned that their initial report feels misleading and that, even after specifically discussing that we would prefer not to block all of their IPs, but might have to, it recurred. It has been an effective mechanism in the past to get the issue the attention it needs and MIT is not the first to tell us they took care of it and have it recur. Nor are they the first one we have denied for multiple days. An event of this variety is a very rare event indeed and this one is not see as more nefarious than others at this moment, just more successful due to the pattern change mentioned earlier today.
3. Posting to their web site. We certainly can ask them to do so. Note that these hackers can be as much of a pain for MIT and their institutions as they are for us, especially with all of their IPs denied. I'll just weigh in plainly here, forgive the candor, I don't think librarians would be likely to take this suggestion in the spirit it is intended and often don't have control over their library pages.

We'll have to circle in o this one this week, once the data is presented, to make recommendations for next steps. MIT has not responded as yet.

Thanks,

[REDACTED]

**Subject:** MIT Denied Access to JSTOR

---

Good Evening,

Yesterday afternoon, [REDACTED] reported to me that they were blocking all of MIT's IP addresses from access to JSTOR. A robot was starting a session, downloading a PDF, starting a new session, downloading a PDF ad infinitum and rapidly causing ½ of the Manchester servers to bog down and require restart, affecting other users.

This activity from MIT was first noticed on 9/25 and 9/26 and a smaller range was blocked at that time. We addressed the issue with MIT, they asserted a visiting scholar was responsible and that it would not recur. It recurred yesterday. [REDACTED] is summarizing both events and progress against that summary can be tracked here [OPS-1843](#). I notified MIT of the recurrence and suspension directly and am awaiting their response.

[REDACTED], [REDACTED], and [REDACTED] are aware of this issue as are [REDACTED] and [REDACTED]. [REDACTED] rightly pointed out that I should loop all of you in as there may be some knock on effects for publisher stats and institutional stats. The volume of material downloaded in both cases was sizeable, but [REDACTED] will report on the details of both volume and affected journals.

The main takeaway is that MIT has one of the few allocated Class A IP ranges in the world and all of these IPs are suspended from accessing JSTOR at the firewall. It is the largest suspension of IPs in JSTOR history as far as I am aware and was caused by a very successful robot employing a new abuse pattern, which we will need to address. I will be sure to loop you in on future conversations to follow in the coming days.

I am not hearing any complaints from users through any of our feedback channels. Please let me know if you have any questions and I'll be glad to field them.

Best,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**Subject:** Update: JSTOR & MIT

---

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

**Subject:** RE: JSTOR Participant Lists

---

Hi [REDACTED] and thanks [REDACTED]

From my perspective, there are 3 issues to be addressed. The display for these institutions can be found here...

<http://about.jstor.org/participate-jstor/participants>

1. Notice 'A' as the first entry. We are not sure where this is coming from, but also notice *Account - ITHAKA Naming Conventions-ITHAKA Customer Name - English* is an entry as well. This is a column header from the source file which needs to be ignored in the XML transform.
2. Notice the 2<sup>nd</sup> and 3<sup>rd</sup> entry...

AAB&€“Riinvest University	Access Information	Kosovo
AAB-Riinvest University	Access Information	Kosovo

...if you scroll through the list, it appears that most institutions with a diacritic or symbol are being duplicated on the list (comma seems to be alright, but not dash, apostrophe or any 'foreign' diacritics. We can get the list to generate without the foreign diacritics, but we need it to function with apostrophes and dashes. Perhaps one adjustment will allow for them all.

3. We are getting reports that the U page is not loading. Since there are so many universities on that page, I am wondering if we can think about a solution that allows for faster load time.

Thanks,

[REDACTED]

Hi [REDACTED]

I spoke with [REDACTED] about the data problems with the participants list. Are you or [REDACTED] able to provide me more specifics on the data problems? Is there a problem with the data and/or the output? Also, is there a URL where we can see the issue?

If it is best for me to work directly with [REDACTED], I will be happy to do so.

Thanks,

Hi [REDACTED]

Nice to hear from you. Welcome back.

I believe the Participants list is a dynamic list from this feed:

[http://\[REDACTED\]](http://[REDACTED]) When the feed is updated the participants list on the website dynamically updates.

[REDACTED] is out today, however I will follow up with [REDACTED] on Monday to confirm the participants list works as I believe it does. If it does not, we will work directly with [REDACTED] to discuss how the feed should be updated, etc.

Thanks,

Hi, [REDACTED]—

Thanks very much for working with [REDACTED] on some of the questions we've had. I've been out of the office quite a bit and [REDACTED] stepped in to help. I'm now back in the office on a more consistent basis, I hope, and will be refocusing on the [about.jstor.org](http://about.jstor.org) site.

I do have one immediate question for you. I know [REDACTED] coordinated the participant lists work with you and

██████████ and I don't have a good understanding of how those were produced. There are some data problems on the list, and we need to update them and add/remove participants. I'm wondering we could put ██████████ ██████████ in direct contact with ██████████ to work on those lists? ██████████ team manages that data and produces the list, and I've copied ██████████ on this message.

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

---

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Done.

Dear [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

**Subject:** RE: Update: JSTOR & MIT

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

Subject: Re: Extreme robotic activity of JSTOR at MIT

Thanks [REDACTED],

There was one Facebook post at midnight, a normal user from MIT (at least via his profile he lists the MIT Network in Facebook), having trouble. I have not responded, wanting to give MIT at least the morning to touch base. Still no word from MIT.

Looping in [REDACTED] and [REDACTED] I brought then up to speed last night.

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**Subject:** MIT Denied Access to JSTOR

Good Evening,

Yesterday afternoon, [REDACTED] reported to me that they were blocking all of MIT's IP addresses from access to JSTOR. A robot was starting a session, downloading a PDF, starting a new session, downloading a PDF ad infinitum and rapidly causing 1/2 of the Manchester servers to bog down and require restart, affecting other users.

This activity from MIT was first noticed on 9/25 and 9/26 and a smaller range was blocked at that time. We addressed the issue with MIT, they asserted a visiting scholar was responsible and that it would not recur. It recurred yesterday. [REDACTED] is summarizing both events and progress against that summary can be tracked here [OPS-1843](#). I notified MIT of the recurrence and suspension directly and am awaiting their response.

[REDACTED] and [REDACTED] are aware of this issue as are [REDACTED]. [REDACTED] rightly pointed out that I should loop all of you in as there may be some knock on effects for publisher stats and institutional stats. The volume of material downloaded in both cases was sizeable, but [REDACTED] will report on the details of both volume and affected journals.

The main takeaway is that MIT has one of the few allocated Class A IP ranges in the world and all of these IPs are suspended from accessing JSTOR at the firewall. It is the largest suspension of IPs in JSTOR history as far as I am aware and was caused by a very successful robot employing a new abuse pattern, which we will need to address. I will be sure to loop you in on future conversations to follow in the coming days.

I am not hearing any complaints from users through any of our feedback channels. Please let me know if you have any questions and I'll be glad to field them.

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

---

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literaturum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the

different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED] thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

[REDACTED]

**Subject:** Update: JSTOR & MIT

---

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

-----Original Message-----

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard

drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Thanks for the report. Well done!

We have to learn more but it strikes me that we pursued the right amount of diligence and yet sensitivity to the need for keeping access up and running. We will need to monitor and figure out what to do when it starts up again.

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

### Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page

of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

The following is the message from MIT. We need specifics and an assessment if we can restore their ClassB or Class C at this point.

Hello [REDACTED],

Could you supply the IP address(es) and dates/times of this activity so we can investigate? I do not see any other message to me from JSTOR about this.

Is it possible to restore access to MIT aside from the appropriate class C range, or even class B range? That would stop the activity without excluding thousands of innocent users who are not misusing the system. While we understand your reasoning below, it's also true that we simply do not see campus-wide shutdowns from our providers these days. That method was unfortunately not uncommon in the 90's but is not a current practice for our providers because it has not been shown to be necessary to stem excessive use and has such negative service impacts.

Thank you, and I look forward to hearing back from you.

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

Hi [REDACTED]

Thanks for your note. I have copied [REDACTED], who is our lead on these efforts and who has tried to be in touch with you and your colleagues over the last couple of days. I am surprised that you have not heard from us other than from me. This is very strange since I know we have been trying to contact you. I wonder if some messages are getting trapped in a spam filter or something. [REDACTED] will be able to answer your questions and work with you to restore service.

We understand that this is an extreme step -- we never take it either. The only reason we did so in this case was because of the scale of the problem and its impact on other users beyond MIT. I suggest that you and [REDACTED] speak as soon as possible so that we can get a plan in place to address this. We also want access restored as soon as possible.

Best

Hello [REDACTED],

Could you supply the IP address(es) and dates/times of this activity so we can investigate? I do not see any other message to me from JSTOR about this.

Is it possible to restore access to MIT aside from the appropriate class C range, or even class B range? That would stop the activity without excluding thousands of innocent users who are not misusing the system. While we understand your reasoning below, it's also true that we simply do not see campus-wide shutdowns from our providers these days. That method was unfortunately not uncommon in the 90's but is not a current practice for our providers because it has not been shown to be necessary to stem excessive use and has such negative service impacts.

Thank you, and I look forward to hearing back from you.

Good Morning [REDACTED] & [REDACTED],

My apologies for not having been in touch with you. I attempted to email you twice this weekend, but we have missed the connection. In any case, I am gathering the IP information and timestamps from our [REDACTED] staff to help identify the activity and am asking whether the Class B or Class C can be reinstated. Updates as I have them.

Thanks,

[REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Hello [REDACTED],

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

[REDACTED]

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Dear [REDACTED],

Thank you for your reply. I will ask our [REDACTED] staff to reinstate the suspended Class C range as soon as possible and will confirm once completed.

Thanks,

[REDACTED]

Importance: High

Hello [REDACTED],

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

[REDACTED]

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]  
[REDACTED]

[REDACTED] commented on OPS-1845:

-----  
Given that [REDACTED] is disabled, and the MIT source address group is confining MIT to this disabled VIP, I suspect that MIT is receiving no DNS responses for www.jstor.org at all.

Enabling [REDACTED] would put other innocent victims onto the single princeton server as well, so that doesn't seem like a very good option.

I could do any of these things:

1. put all of MIT back into the main pool with everyone else.
2. confine MIT to princeton with a more carefully thought out method that requires a lot more configuration.
3. change the [REDACTED]-confined source pool to be only the narrow 18.55.5.0/24 instead of the broad 18.0.0.0/8 (meaning that only this narrow network won't get DNS response, instead of all of MIT getting no response).

Given the size of pdfs, I am serious about setting an all out bandwidth  
limit for that net on the firewall if it's possible technically.

They were using about 50mb of bandwidth for a good part of Saturday. So, if  
we limit the whole thing to 1-5mb that should keep the problem on their side  
rather than ours. They'll run out of bits before we start to have site  
problems. Though, that abuse appliance [REDACTED] was talking about after last

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our dfr.jstor.org site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

---

[ [http://\[REDACTED\]](http://[REDACTED]) ]

[REDACTED] commented on OPS-1843:  
-----

OK, here's the situation so far (I am continuing more detailed analysis):

For the recent event:

-Start time = 2010-10-09 14:53:18 from IP = 018.055.005.100  
-End time = 2010-10-09 19:08:01

Another IP got in the act:

-Start time = 2010-10-09 18:31:49 from IP = 018.055.007.048  
-End time = 2010-10-09 19:07:37

The Start times are the timestamp values for the initial session creation. End times are the timestamp values for final session termination time.

Web servers hosting these sessions are all in Ann Arbor - [REDACTED] through [REDACTED].

8,515 sessions in all - 7,605 had MachineIDs (a unique ID in the JSTOR cookie identifying the computer uniquely), and 910 had none (either a new machine to JSTOR, or previous cookie expired/was deleted).

Initial article hit was:

The Mystery of Misspelling

Author(s): Robert L. Coard Source: The Elementary School Journal, Vol. 58, No. 2 (Nov., 1957), pp. 97-100

Published by: The University of Chicago Press

Stable URL: <http://www.jstor.org/stable/1000034>

The last article hit appears to be:

The Elementary School Journal

Vol. 50, No. 6 (Feb., 1950), pp. 358-359

Published by: The University of Chicago Press

<http://www.jstor.org/stable/999011>

So,

-Beginning DOI = 1000034, the 44th item in a sequential listing of our DOIs  
-Ending DOI = 999011, 100th from the bottom in the same listing

They're clearly going after substantially the entire corpus.

More later...

**Subject:** RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

---

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if an when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

[REDACTED] thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

Hi [REDACTED],

Do we want to create an abuse page for when we have to block an institution due to abuse reasons? We could create a new website that can host this page, so we don't impact other performance (i.e. Of about.jstor.org) and give users a bit more of a reason why we are blocking them.

Thanks,

[REDACTED]

**Subject:** RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

---

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if an when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Hi [REDACTED]

Trusting you've seen my reply now or will shortly, to [REDACTED] and [REDACTED]. By way of context, this one has the "we have no idea who did it" feel all over it. Trying to press the specifics of that issue to garner an admission, which is at least a step in the right direction. Still waiting on statistics surrounding the total level of activity, but [REDACTED] reports that this past Saturday's incident yielded 8,422 PDFs taken. I don't know how you feel about that, but from my perspective, much less than I had anticipated.

Anyway, it is always a bit of good cop, bad cop on these and right now MIT is playing the show and tell. They want to show us what they do have, but they don't want to tell us anything specific. A straight admission that they don't have significant logs or access controls to identify or prevent this kind of incident at this very moment would be much better than where we are currently. They wouldn't be the first to not keep enough logging information to identify individual users. I'll go good cop for the next round.

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Hello Again,

We have requested that the IP range be unblocked at the firewall and that process is currently underway. I will confirm when that is accomplished and report the IPs and timestamps surrounding the event shortly.

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED] thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Importance: High

Hello [REDACTED],

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

[REDACTED]

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

**Subject:** Update: JSTOR & MIT

---

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the

users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR & MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Cc: [REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks 

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.
  - a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ( ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

- b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was

necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of education, where cultural differences can significantly impact learning outcomes.

The second part of the paper focuses on the methodology used in the study. It describes the process of selecting participants, collecting data, and analyzing the results. The authors emphasize the importance of using a mixed-methods approach to capture both quantitative and qualitative data.

The third part of the paper presents the findings of the study. It shows that there are significant differences in learning outcomes between students from different cultural backgrounds. These differences are attributed to a variety of factors, including language barriers, social norms, and access to resources.

The final part of the paper discusses the implications of the findings for education. It suggests that educators should take steps to create a more inclusive learning environment for all students. This can be done by providing additional support for students who are struggling and by incorporating culturally relevant materials into the curriculum.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]  
Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Sent: Monday, October 11, 2010 12:47 PM  
To: [REDACTED]  
Cc: [REDACTED]  
Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

---

Hi [REDACTED]

What do you mean by the startling numbers that came in. Are you referring to this 453,570! ? Or was there another incident last night. That is a very scary number. Have we put in further protections -- I thought we had trips in place to prevent something like this from happening. This is very concerning. Does MIT understand the level of abuse here -- the number of articles taken?

Do we have any idea where those articles went?

[REDACTED]

**Subject:** Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible.

For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us

to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

[REDACTED]

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

Best,

Thanks,

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

HI [REDACTED]

I apologize for the lack of clarity in language here. [REDACTED] finished compiling the stats around the 9/25, 9/26 incident late last night. There has not been a recurrence.

As for additional protections, this is very tricky. [REDACTED] is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

Start a session  
Download a PDF  
End the session  
Clear cookies

Repeat.

By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

Thanks,

[REDACTED]

Hi [REDACTED]

What do you mean by the startling numbers that came in. Are you referring to this 453,570! ? Or was there another incident last night. That is a very scary number. Have we put in further protections -- I thought we had trips in place to prevent something like this from happening. This is very concerning. Does MIT understand the level of abuse here -- the number of articles taken?

Do we have any idea where those articles went?

[REDACTED]

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it

does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually

don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

Thanks [REDACTED]

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED] This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

114

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

**Subject:** RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

---

Dear [REDACTED]

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Best,

[REDACTED]

Subject: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello Again,

We have requested that the IP range be unblocked at the firewall and that process is currently underway. I will confirm when that is accomplished and report the IPs and timestamps surrounding the event shortly.

[REDACTED]

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

██████ thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

██████████

Importance: High

Hello ██████████

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

JSTOR

[REDACTED]@ithaka.org>[ithaka.org](http://ithaka.org)

JSTOR is a not-for-profit service that helps scholars, researchers, and students discover, use, and build upon a wide range of content in a trusted digital archive. We use information technology and tools to increase productivity and facilitate new forms of scholarship. JSTOR is part of ITHAKA, a not-for-profit organization that helps the academic community use digital technologies to preserve the scholarly record and to advance research and teaching in sustainable ways.

Hi [REDACTED]

I apologize for the lack of clarity in language here. [REDACTED] finished compiling the stats around the 9/25, 9/26 incident late last night. There has not been a recurrence.

As for additional protections, this is very tricky. [REDACTED] is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

Start a session  
Download a PDF  
End the session  
Clear cookies

Repeat.

By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold

Thanks,

Hi [REDACTED]

What do you mean by the startling numbers that came in. Are you referring to this 453,570! ? Or was there another incident last night. That is a very scary number. Have we put in further protections -- I thought we had trips in place to prevent something like this from happening. This is very concerning. Does MIT understand the level of abuse here -- the number of articles taken?

Do we have any idea where those articles went?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

### Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address)

will see the standard error page that was created last August as we implemented abuse tools...

## Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well.

In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]  
JSTOR

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from

end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Subject: RE: Update: JSTOR & MIT

Thanks,

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this

circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

[REDACTED]

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Hi [REDACTED]

That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

[REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED] for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

Best,

[REDACTED]

Hi ██████████

I apologize for the lack of clarity in language here. ██████████ finished compiling the stats around the 9/25, 9/26 incident late last night. There has not been a recurrence.

As for additional protections, this is very tricky. ██████████ is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

Start a session  
Download a PDF  
End the session  
Clear cookies

Repeat.

By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

I was unaware of the volume until ██████████ completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

I am having a meeting with ██████████ here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

Thanks,

██████████

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it

does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually

don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected

timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please

accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

[REDACTED]

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP

range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent

access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and

using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

Subject: Re: Extreme robotic activity of JSTOR at MIT

Thanks [REDACTED]

There was one Facebook post at midnight, a normal user from MIT (at least via his profile he lists the MIT Network in Facebook), having trouble. I have not responded, wanting to give MIT at least the morning to touch base. Still no word from MIT.

Looping in [REDACTED] and [REDACTED] I brought then up to speed last night.

>

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Hi [REDACTED]

That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

[REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED], for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

Best,

[REDACTED]

Hi [REDACTED]

I apologize for the lack of clarity in language here. [REDACTED] finished compiling the stats around the 9/25, 9/26 incident late last night. There has not been a recurrence.

As for additional protections, this is very tricky. [REDACTED] is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

Start a session  
Download a PDF  
End the session  
Clear cookies

Repeat.

By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

Thanks,

Hi [REDACTED]

What do you mean by the startling numbers that came in. Are you referring to this 453,570! ? Or was there another incident last night. That is a very scary number. Have we put in further protections -- I thought we had trips in place to prevent something like this from happening. This is very concerning. Does MIT understand the level of abuse here -- the number of articles taken?

Do we have any idea where those articles went?

-----Original Message-----

From: [REDACTED]

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas

200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]  
JSTOR

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]  
Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard

drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

[REDACTED]

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

Hi [REDACTED]

Thanks very much for this thorough summary of the situation. You guys are on it and I am glad of that. We are all equally concerned about the enormous scale of the initial breach, but I am not trying to engage at the level of trying to help figure out a technical solution! Sorry about that; that one idea just popped into my head.

As for the question of how we should deal with a further problem at MIT, it seems to me that we should talk to MIT about the scale of the first incident, that we should make sure we are all on the same page about the severity of this breach, and that we should let them know in advance what our plan is for handling future transgressions. We want them to understand and not be surprised by what we choose to do.

Thanks for your good and thorough work on this.

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: Update: JSTOR & MIT

Hi [REDACTED]

That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

[REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED], for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200

by CSP and perhaps further if it proves successful and not unduly prohibitive.

I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

Best,

██████████

Subject: RE: Update: JSTOR & MIT

Hi ██████████

I apologize for the lack of clarity in language here. ██████████ finished compiling the stats around the 9/25, 9/26 incident late last night. There has not been a recurrence.

As for additional protections, this is very tricky. ██████████ is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

Start a session  
Download a PDF  
End the session  
Clear cookies

Repeat.

By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

Thanks,

[REDACTED]

Hi [REDACTED]

What do you mean by the startling numbers that came in. Are you referring to this 453,570! ? Or was there another incident last night. That is a very scary number. Have we put in further protections -- I thought we had trips in place to prevent something like this from happening. This is very concerning. Does MIT understand the level of abuse here -- the number of articles taken?

Do we have any idea where those articles went?

[REDACTED]

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We

have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

114

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost

always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard

to stop.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be

anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Thanks [REDACTED] and agreed.

There is no question the focus on this issue will increase with CSP. We are speculating about new patterns already, like robotic low level downloading of all content in sequence on a regular schedule and in synch with our CSP partner's data release schedules. Easy to imagine, harder to detect amidst the noise and typical user patterns.

We'll have to adjust.

>

> As for additional protections, this is very tricky. [REDACTED] is also noting thousands of machine IDs (unique machines used in the Literatum record). This does not mean that thousands of machines were used, but the pattern now looks like...

>  
> Start a session  
> Download a PDF  
> End the session  
> Clear cookies  
>  
> Repeat.  
>  
> By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

>  
> The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

>  
> I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

>  
> I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

> Hello [REDACTED] and [REDACTED]  
>  
> Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

>  
> Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

>  
> We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

>  
> If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED]  
[REDACTED] copied here.

>  
> Best,

>  
>  
>  
> Thank You [REDACTED]  
>  
> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.  
>  
> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>  
> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>  
> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.  
>  
> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>  
> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>  
> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>  
> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>  
> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

>

> Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR

Support.

>  
> ...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

>  
> b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

>  
>  
> 2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

>  
> "Server not found. Firefox can't find the server at www.jstor.org."  
>  
> ...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

>  
> In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

>  
> It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

>  
> That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

>  
> All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

>  
> In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

> Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is

possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

>  
> In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

> Afternoon Update,

>  
> Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

>  
> If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

>  
> In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

>> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Have a great (and as [REDACTED] said) hopefully quiet weekend.

Best

Thanks [REDACTED] and agreed.

There is no question the focus on this issue will increase with CSP. We are speculating about new patterns already, like robotic low level downloading of all content in sequence on a regular schedule and in synch with our CSP partner's data release schedules. Easy to imagine, harder to detect amidst the noise and typical user patterns.

We'll have to adjust.

Best,

[REDACTED]

> Hi [REDACTED]

>

> That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

>

> [REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED] for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

>

> I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

>

>

> I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some

solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

>  
> By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

>

> The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

>

> I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

>

> I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

>

> Hello [REDACTED] and [REDACTED]

>

> Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

>

> Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

>

> We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

>

> If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if an when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

> [REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

> Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

>

> ...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

>

> b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

>

>

> 2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was

necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

>  
> "Server not found. Firefox can't find the server at www.jstor.org."  
>  
> ...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

>  
> In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

>  
> It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

>  
> That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

>  
> All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

>  
> In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

>  
> Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

> Afternoon Update,

>

> Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

>

> If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

>

> In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

>> Dear [REDACTED]

>>

>> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

>>

Thanks [REDACTED]

Watching carefully and coordinating thoughts on next steps with them. Frankly, this is the typical effort + transparency that we look for in abuse cases. They've come clean and offer an alternative that is reasonable. Routing their traffic through a proxy should provide the opportunity for more granular monitoring and greater throttling controls on their end. Scale is an understandable problem across a Class A range in terms of affecting real time analysis of logs across servers and activity (like MDC \* N). Not acceptable, but raking them over the coals for no effect from here on out in my opinion. Typically, this is good cop time, pending no trouble this weekend. We'll try to take this opportunity to partner with them and gain better understanding as suggested, but we may need to get a technical level deeper than [REDACTED] & [REDACTED] to do that, in my estimation.

Thanks again,

[REDACTED]

Thanks [REDACTED] and agreed.

There is no question the focus on this issue will increase with CSP. We are speculating about new patterns already, like robotic low level downloading of all content in sequence on a regular schedule and in synch with our CSP partner's data release schedules. Easy to imagine, harder to detect amidst the noise and typical user patterns.

We'll have to adjust.

Best,

[REDACTED]

> Hi [REDACTED]

>

> That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I

imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

>

> [REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED] for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

>

> I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

>

>

> I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

> Repeat.  
>  
> By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

>  
> The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

>  
> I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

>  
> I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

>  
>  
>  
> Hello [REDACTED] and [REDACTED]  
>  
> Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

>  
> Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

>  
> We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

>  
> If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

>  
>  
>  
> Thank You [REDACTED]  
>  
> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

>  
> First, let me take the opportunity to clarify the two versions of this that occur...

>  
> 1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

>  
> a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

>

> Access Suspended

>

> Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

>

> ...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

>

> b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

>

>

> 2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

>

> "Server not found. Firefox can't find the server at www.jstor.org."

>

> ...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

>

>

> In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

>

> It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

>

> That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We

need to be level headed and even handed. This particular MIT case is extremely abnormal.

>

> All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

>

> In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

> Done.

>

> Dear [REDACTED] & [REDACTED]

>

> Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

>

> Again, please do let me know if I can assist further from our end and I'll be glad to do so.

>

> Thanks, [REDACTED]

>

> Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

>

> In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

>

> -----Original Message-----

> From: [REDACTED]

> Sent: Monday, October 11, 2010 12:47 PM

> To: [REDACTED]

> Cc: [REDACTED]

> Subject: Update: JSTOR & MIT

>

> Afternoon Update,

>

> Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

>

> If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

>

> In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be

anyone/anywhere.

>> Dear [REDACTED]

>>

>> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

>>

>> Our staff have communicated with your staff and will be working to get MIT access back up just as soon as possible.

Dear [REDACTED],

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

#### Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

#### Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

Hello [REDACTED], I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

[REDACTED]

---

[REDACTED]  
[REDACTED]  
MIT Libraries

P [REDACTED]  
[REDACTED]@mit.edu

<http://libraries.mit.edu/scholarly>

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if an when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the

users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████████

Dear ██████████,

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Best,

[REDACTED]

Hello [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are

wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Hello Again,

We have requested that the IP range be unblocked at the firewall and that process is currently underway. I will confirm when that is accomplished and report the IPs and timestamps surrounding the event shortly.

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Importance: High

Hello [REDACTED],

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems

administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](https://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

---

Hi everyone,

While I am encouraged that MIT is being cooperative, I remain concerned by what seems a rather tepid level of concern that they seem to be demonstrating about the loss. [REDACTED], maybe in the conversations you have had the concern comes through more loudly, but I am sure that if they had lost an equivalent number of books from their library overnight (what 25,000-30,000 books) they would not be so nonchalant. If the police came and said-- "did you change the locks? Ok, case closed" -- They would not be too satisfied. They would want to know who did it. Now I understand that this is not a perfect comparison. There is a difference between physical and virtual. The fact is that this downloading does not prevent others from getting access to that content in the future (either via MIT or from us), whereas the loss of the books does prevent future access. Therein lies the rub in all e-resources and media. Using it does not take away from others. Nevertheless, we need to understand at what level they feel an obligation to help us protect these resources. Are they in conformance with the license agreement? Do we need to send a stronger signal?

It would be helpful to convene a brief call on Monday to consolidate our reaction to this situation and to decide if there are next steps to be taken, and to be sure that it is clear what empowerment framework we need to have in place to deal with such situations in the future.

[REDACTED], can you send out invites and help us get a call together. I don't want this to be a long call, we have so much to do and we cannot put the genie back in the bottle. 30 minutes max, preferably 15. But I do want to make sure that we are all on the same page about this.

Thanks

[REDACTED]

Thanks [REDACTED],

Watching carefully and coordinating thoughts on next steps with them. Frankly, this is the typical effort +

transparency that we look for in abuse cases. They've come clean and offer an alternative that is reasonable. Routing their traffic through a proxy should provide the opportunity for more granular monitoring and greater throttling controls on their end. Scale is an understandable problem across a Class A range in terms of affecting real time analysis of logs across servers and activity (like  $MDC * N$ ). Not acceptable, but raking them over the coals for no effect from here on out in my opinion. Typically, this is good cop time, pending no trouble this weekend. We'll try to take this opportunity to partner with them and gain better understanding as suggested, but we may need to get a technical level deeper than [REDACTED] & [REDACTED] to do that, in my estimation.

Thanks again,

[REDACTED]

Thanks [REDACTED] and agreed.

There is no question the focus on this issue will increase with CSP. We are speculating about new patterns already, like robotic low level downloading of all content in sequence on a regular schedule and in synch with our CSP partner's data release schedules. Easy to imagine, harder to detect amidst the noise and typical user patterns.

We'll have to adjust.

Best,

[REDACTED]

We are all equally concerned about the enormous scale of the initial breach, but I am not trying to engage at the level of trying to help figure out a technical solution! Sorry about that; that one idea just popped into my head.

>

> As for the question of how we should deal with a further problem at MIT, it seems to me that we should talk to MIT about the scale of the first incident, that we should make sure we are all on the same page about the severity of this breach, and that we should let them know in advance what our plan is for handling future transgressions. We want them to understand and not be surprised by what we choose to do.

> Cc: ██████████

> Subject: RE: Update: JSTOR & MIT

>

> Hi ██████,

>

> That would be an ██████████ question and I'll loop ██████ in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. ██████ and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

>

> ██████ and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, ██████ and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. ██████ for instance, rigged a small check of response times from the site through ██████ phone so that decreasing response rates will flag unusually high activity.

>

> I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I

am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

>

>

> I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

> Download a PDF

> End the session  
> Clear cookies  
>  
> Repeat.  
>  
> By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

>  
> The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

>  
> I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>  
> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>  
> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.  
>  
> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have

some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can

get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

>

> b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

> 2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

>

> "Server not found. Firefox can't find the server at www.jstor.org."

>

> ...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

>

>

> In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

>

> It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

>

> That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

>

> All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in a 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

>

> In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

> Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of

deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

>

> In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

> Afternoon Update,

>

> Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

>

> If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

>

> In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

>

> Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

>> Dear [REDACTED]

>>

>> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

---

Thanks [REDACTED],

I appreciate your candor here. I have dealt with many cases over the years and understand the difficulties inherent with tracking down individual users. I am hopeful we can use this opportunity to work together towards building more stable, sustainable and secured access to JSTOR. We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

18.\*.\*.\*  
128.30-31.\*.\*

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED], I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

[REDACTED]

---

[REDACTED]  
[REDACTED]  
MIT Libraries

P [REDACTED]

[REDACTED]@mit.edu

<http://libraries.mit.edu/scholarly>

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and

acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello ██████████ and ██████████,

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge

again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Hello [REDACTED]

We've investigated this case and, because the origin of the activity was a guest visiting MIT, we believe it will not recur.

We hope you will be able to restore the class C range that has been suspended based on this information.

Thank you,

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

**Subject:** FW: Update: JSTOR & MIT

Hi everyone,

While I am encouraged that MIT is being cooperative, I remain concerned by what seems a rather tepid level of concern that they seem to be demonstrating about the loss. [REDACTED], maybe in the conversations you have had the concern comes through more loudly, but I am sure that if they had lost an equivalent number of books from their library overnight (what 25,000-30,000 books) they would not be so nonchalant. If the police came and said-- "did you change the locks? Ok, case closed" -- They would not be too satisfied. They would want to know who did it. Now I understand that this is not a perfect comparison. There is a difference between physical and virtual. The fact is that this downloading does not prevent others from getting access to that content in the future (either via MIT or from us), whereas the loss of the books does prevent future access. Therein lies the rub in all e-resources and media. Using it does not take away from others. Nevertheless, we need to understand at what level they feel an obligation to help us protect these resources. Are they in conformance with the license agreement? Do we need to send a stronger signal?

It would be helpful to convene a brief call on Monday to consolidate our reaction to this situation and to decide if there are next steps to be taken, and to be sure that it is clear what empowerment framework we need to have in place to deal with such situations in the future.

[REDACTED], can you send out invites and help us get a call together. I don't want this to be a long call, we have so much to do and we cannot put the genie back in the bottle. 30 minutes max, preferably 15. But I do want to make sure that we are all on the same page about this.

Thanks

[REDACTED]

Thanks [REDACTED]

Watching carefully and coordinating thoughts on next steps with them. Frankly, this is the typical effort + transparency that we look for in abuse cases. They've come clean and offer an alternative that is reasonable. Routing their traffic through a proxy should provide the opportunity for more granular monitoring and greater throttling controls on their end. Scale is an understandable problem across a Class A range in terms of affecting real time analysis of logs across servers and activity (like MDC \* N). Not acceptable, but raking them over the coals for no effect from here on out in my opinion. Typically, this is good cop time, pending no trouble this weekend. We'll try to take this opportunity to partner with them and gain better understanding as suggested, but we may need to get a technical level deeper than [REDACTED] & [REDACTED] to do that, in my estimation.

Thanks again,

[REDACTED]

I am disturbed, as I know you are, by [REDACTED] at MIT's latest response. I know, you predicted it. We'll have to think carefully about how to handle it...

Have a great (and as [REDACTED] said) hopefully quiet weekend.

Best

[REDACTED]

Thanks [REDACTED] and agreed.

There is no question the focus on this issue will increase with CSP. We are speculating about new patterns already, like robotic low level downloading of all content in sequence on a regular schedule and in synch with our CSP partner's data release schedules. Easy to imagine, harder to detect amidst the noise and typical user patterns.

We'll have to adjust.

Best,

[REDACTED]

> Hi [REDACTED]

>

> Thanks very much for this thorough summary of the situation. You guys are on it and I am glad of that. We are all equally concerned about the enormous scale of the initial breach, but I am not trying to engage at the level of trying to help figure out a technical solution! Sorry about that; that one idea just popped into my head.

>

> As for the question of how we should deal with a further problem at MIT, it seems to me that we should talk to MIT about the scale of the first incident, that we should make sure we are all on the same page about the severity of this breach, and that we should let them know in advance what our plan is for handling future transgressions. We want them to understand and not be surprised by what we choose to do.

>

> That would be an [REDACTED] question and I'll loop [REDACTED] in on it. As for the existent Literatum tools, they apply to the entire site and every participant and cannot be customized on an institution by institution basis. I

imagine that several varieties of notification triggers can be established, but cannot speak to the ease or difficulty of implementation. [REDACTED] and I have discussed this issue a few times today, exchanged personal phone numbers and discussed blocking protocols for this weekend, in depth.

>

> [REDACTED] and I both agreed that 400K was crazy big, 8000 on the last grab was actually quite good considering the 1st incident and that anything over 8000 on a 3rd incident would sure feel like a digression. With the speed at which this thing operates, [REDACTED] and crew will have to do some decent strategizing and monitoring to meet this expectation. We are working in coordination to implement various measures to try and prepare. [REDACTED] for instance, rigged a small check of response times from the site through [REDACTED] phone so that decreasing response rates will flag unusually high activity.

>

> I am going to ratchet down the # of sessions per IP in one hour from 5000 to 1000 and watch it very closely. I am also ratcheting down the 300 PDFs in one session over the next few weeks, with the intent of getting to 200 by CSP and perhaps further if it proves successful and not unduly prohibitive.

>

>

> I would say, frankly, that I do expect it to recur. But I also expect that increased attention to the issue and steps in place will limit the number of articles acquired to fewer articles this time around. I won't try and predict a number. Beyond that, we will continue to look for ways to prevent leakage for this pattern and, I think, should be prepared for a long term embargo against ranges from MIT in violation of our Terms & Conditions. That is, if we block another IP range from this activity, I would advise against reinstating it at all until they give some solid indication that they are on top of it. I see no evidence from MIT as yet that would indicate they have this situation under control or the user identified.

>

> Start a session

> Download a PDF

> End the session

> Clear cookies

>

> Repeat.

>

> By clearing their cookies and starting a new session, they effectively dodge the abuse tools in Literatum. There is a # of sessions by IP rule, set at 5000 sessions, based on the 9/25 incident, that is in place that might have caught the 2nd incident, but was not in place for the 1st incident. We are analyzing what happened there.

>

> The # of sessions per IP rule did not fire because it is on a server by server basis and the user was load balanced across more than a few servers (8,500 sessions would only need two servers to dodge the rule). We can ratchet the # of sessions down, but I am requesting data to find an effective level that would have caught incident #2, without disrupting normal users elsewhere. With our MDC and number of servers, there may be no sweet spot that accomplishes both.

>

> I was unaware of the volume until [REDACTED] completed the report last night and have not, as yet, reached out to MIT. This is very concerning and needs some extensive follow up.

>

> I am having a meeting with [REDACTED] here shortly to fast track a lower sessions per IP threshold recommendation and to make sure we are watching for MIT closely until further notice, given their non-committal correspondence yesterday, this weekend looks like a red flag window for this to recur.

>  
> Hello [REDACTED] and [REDACTED],  
>  
> Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

>  
> Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

>  
> We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

>  
> If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

>

>  
>  
>  
>  
> Thank You [REDACTED],  
>  
> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

>

> Access Suspended

>

> Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

>

> ...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

>

> b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

>

>

> 2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

>

> "Server not found. Firefox can't find the server at www.jstor.org."

>

> ...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

>

>

> In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

>

> It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

>

> That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We

need to be level headed and even handed. This particular MIT case is extremely abnormal.

>

> All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

>

> In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

> Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

>

> In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

> Afternoon Update,

>

> Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

>

> If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

>

> In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be

anyone/anywhere.

>> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Thanks [REDACTED]

I appreciate your candor here. I have dealt with many cases over the years and understand the difficulties inherent with tracking down individual users. I am hopeful we can use this opportunity to work together towards building more stable, sustainable and secured access to JSTOR. We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

18.\*.\*.\*  
128.30-31.\*.\*  
128.52.\*.\*  
129.55.\*.\*  
192.52.61-66.\*  
198.125.160-163.\*  
198.125.176-192.\*

Best,

Hello [REDACTED], I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

[REDACTED]

---

[REDACTED]

[REDACTED]

MIT Libraries

P [REDACTED]

[REDACTED]@mit.edu

<http://libraries.mit.edu/scholarly>

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and

acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello ██████████ and ██████████,

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

Subject: RE: JSTOR Abuse at MIT: All IPs Blocked

[REDACTED], thanks very much. We appreciate it.

Looking to the future, would it be possible to clarify that JSTOR will follow the protocol that was ultimately used here, shutting down not the class A range but the class C range, should an excessive use case emerge

again?

We have not had a history of excessive use of JSTOR content from MIT, so the problems do not seem at this time to be widespread. In addition, we are finding that the industry norm at this time is shut down of the specific offending IP.

We can see that in some cases (as here, where the initial suspension did not stop the misuse) moving to suspend the class C range is a reasonable response. But it would be very helpful on our end if we could work out an agreement that a shutdown of the class A range will not be part of the standard initial response protocol for excessive use cases.

We look forward to your thoughts --

Subject: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am writing you this afternoon to let you know that we have been forced to block access to JSTOR from MIT. Yesterday, around 6pm, we began to see hundreds of PDF downloads per minute occurring from multiple sessions at 18.55.6.215. As these requests began to affect performance of the public site, we were forced to deny access to this IP. Requests continued to pour in from this IP for some time, but were denied access. This clearly indicates robotic harvesting of PDFs which violates our Terms & Conditions of Use.

This morning, at around 8am, this activity started again from IP 18.55.6.216, forcing us to restrict access to the entire range of MIT IP addresses. We rarely take this level of response to abusive activity, but felt it necessary to maintain the stability of the web site for other institutions and users.

Once you have identified the responsible party and can assure us that this activity will not continue, we will be happy to restore access as soon as possible. That said, please note that the block had to be executed at the firewall level to prevent performance degradation (even after denying the PDF downloads, the requests themselves were so frequent it continued to be problematic) and thus will require coordination of our systems administrators to restore, which may take some time.

Please do let me know if I can be of additional assistance or if I can provide additional information. Having worked in this area for some time, I am well aware that this activity is normally a compromised username and password or a student/researcher unaware of the impact of their activities or that this method of gathering PDFs is in violation of our Terms and Conditions of Use. We routinely work with researchers through our [dfr.jstor.org](http://dfr.jstor.org) site or by providing data exports to accomplish the intended research aim and would be happy to do so in this case as well if that turns out to be the motivation.

Best,

[REDACTED]

**Subject:** RE: Update: JSTOR & MIT

---

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

**Cc:** [REDACTED]  
**Subject:** RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

[REDACTED]

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

-----Original Message-----

Sent: Tuesday, October 12, 2010 10:39 AM  
To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out,

never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

The first part of the paper discusses the importance of the research and the objectives of the study. It highlights the need for a comprehensive understanding of the subject matter and the role of the researcher in this process. The second part of the paper presents the methodology used in the study, including the data collection methods and the analysis techniques. The third part of the paper discusses the results of the study and the conclusions drawn from the data. The final part of the paper provides a summary of the findings and offers suggestions for future research.

The research was conducted in a systematic and rigorous manner, following the principles of scientific inquiry. The data was collected from a large and diverse sample of participants, ensuring the representativeness of the findings. The analysis was conducted using advanced statistical techniques, allowing for a detailed and accurate interpretation of the results.

The results of the study indicate that there is a significant relationship between the variables under investigation. This finding is consistent with previous research in the field, providing further support for the existing theory. The study also identified several factors that influence the outcome, which may have practical implications for the application of the findings.

In conclusion, the study has provided valuable insights into the subject matter and has contributed to the body of knowledge in the field. The findings suggest that further research is needed to explore the underlying mechanisms and to test the generalizability of the results. The study also highlights the importance of careful data collection and analysis in conducting scientific research.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and

keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**Subject:** RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

---

Hello [REDACTED], I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

18.51.1.222  
18.7.29.240

Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED], [REDACTED], as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

We look forward to moving forward with an econtrol implementation with or without the apache code --

Thanks very much,

[REDACTED]

Thanks

I appreciate your candor here. I have dealt with many cases over the years and understand the difficulties inherent with tracking down individual users. I am hopeful we can use this opportunity to work together towards building more stable, sustainable and secured access to JSTOR. We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

18.\*.\*.\*

128.30-31.\*.\*

128.52.\*.\*

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello ██████████, I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

██████████

---

████████████████████

████████████████████████████████████████████████████████████████████████████████

MIT Libraries

P ██████████

██████████@mit.edu

<http://libraries.mit.edu/scholarly>

Thank You ██████████,

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it

does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

-----Original Message-----

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED]

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as

rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Best,

██████████

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello ██████████ and ██████████,

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this

latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Best,

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Hello Again,

We have requested that the IP range be unblocked at the firewall and that process is currently underway. I will confirm when that is accomplished and report the IPs and timestamps surrounding the event shortly.

**Subject:** RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

██████

Thank You ██████,

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]

Cc: [REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

### Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We

need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]  
Subject: RE: Update: JSTOR & MIT

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of

harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

[REDACTED]

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**Subject:** Re: Update: JSTOR & MIT

---

Hi all

I spent 45 minutes with [REDACTED] yesterday. I have not had a chance to write up the call yet but will do so, hopefully by end of day Friday.

The short summary is that they are extremely concerned about this breach and its scale. [REDACTED] apologized on behalf of MIT and said they have been investigating the event with all resources at their disposal. [REDACTED] emphasized the value of JSTOR both as an asset and as a partner not for profit organization serving the scholarly community. They have also been very concerned about this for their own sake, because the scale of the effort had an impact on their network.

More later, sorry, doors just closed on my plane.

[REDACTED]

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

For the future, what happens when we deny an entire site (from an end user perspective) -- what message do users receive? Is there any opportunity to customize? How frequently do we have to take action at this scale?

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Thanks, [REDACTED]. This is very helpful. It's something of a relief to see that the percentage download of all but a few of the journals was de minimis and that the biggest percentage was 1/3. Obviously, not a great situation overall, but it could be worse.

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We

have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

11/11/2019

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

#### Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost

always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

[The following text is a dense, continuous block of text, likely a scanned document page. It contains numerous lines of text, many of which are illegible due to the quality of the scan. The text appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a formal document or report. The text is too blurry to transcribe accurately.]

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be

---

Good morning,

Many things to consider here. On one hand, the rewriting proxy on our side, if possible, may have complications with MDC and might be characterized rightly as a hack and non-integrated with Literatum. There is well documented dislike for rewriting proxies in general (they can be complicated and hard to tie session information across etc.)

On the other hand, [REDACTED] has discussed having a proxy to manage access on our side for some time and probably has good ideas of what might be done here. I'll be discussing with [REDACTED] today.

Also, to note, it occurs to me that the functionality of such an arrangement may give us useful information about how to do a dynamic WAYF functionality. That is, user shows up unauthed to a JSTOR article, we use IP recognition to suggest a short list of schools nearby, use this proxy arrangement to point them at an institution's self-identified proxy server and loop them back to the article they landed on, now authed.

In practice, this would look similar to Google Scholar's approach. While you may see an institution's name beside content in Google Scholar, we could perhaps suggest a few institutions geographically near your IP. So, click on the school's name in JSTOR, it loops you through that school's proxy and on to the article. Just a thought on how we might benefit from this long term.

Update this afternoon or this morning if we can get far enough with [REDACTED]. Also asking [REDACTED] for the additional analysis you've requested.

Best,

[REDACTED]

[REDACTED]

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

> Dear [REDACTED],

> I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

> We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

**To:** [REDACTED] <[REDACTED]@ithaka.org>  
**Subject:** [JIRA] Commented: (OPS-1845) Restore MIT IP Addresses

---

[ [http://\[REDACTED\]](http://[REDACTED]) ]

[REDACTED] commented on OPS-1845:  
-----

Please see [REDACTED] suggestion below and comment at will. I'll need to be in touch with [REDACTED] and the rest of senior management this afternoon about the feasibility of their request.

Hello [REDACTED],

I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

18.51.1.222  
18.7.29.240

Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we

institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

We look forward to moving forward with an econtrol implementation with or without the apache code --

Thanks very much,

████████

> Restore MIT IP Addresses

> -----

>

> Key: OPS-1845

> URL: <http://████████████████████>

> Project: Operations

> Issue Type: Task

> Reporter: ██████████

> Assignee: ██████████

> Priority: Urgent

>

> ██████████ is asking that the MIT range be restored. ██████████ asked that we take a metered approach and ease them back in if we can. I realize the whole Class A range is blocked at the firewall, but if we could enable the IPs not involved in this latest incident (aka, leave the Class C range suspended) that would be ideal in my estimation. Please advise.

**Attach:** summary of conversation with [REDACTED] re mit abuse 10-21-10.docx

---

Hi everyone,

Here are the notes from my conversation with [REDACTED], who directs both the [REDACTED] and the [REDACTED] at MIT. I want to talk about this a bit at CMG on Monday to settle on next steps.

[REDACTED]

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: Update: JSTOR & MIT

Thanks, [REDACTED]. This is very helpful. It's something of a relief to see that the percentage download of all but a few of the journals was de minimis and that the biggest percentage was 1/3. Obviously, not a great situation overall, but it could be worse.

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Subject: Re: Update: JSTOR & MIT

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the

necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

\_\_\_\_\_

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The next section describes the methodology used in the study, including the data collection and analysis techniques. The results of the study are then presented, followed by a discussion of the findings and their implications. The paper concludes with a summary of the main points and a list of references.

The research was conducted in a systematic and rigorous manner, following the principles of good research practice. The data was collected from a representative sample of the population, and the analysis was carried out using appropriate statistical methods. The results of the study are presented in a clear and concise manner, and the implications of the findings are discussed in detail.

The findings of the study have important implications for the field of research. They provide valuable insights into the nature of the phenomenon being studied, and they suggest areas for further research. The results also have practical implications, and they can be used to inform policy and practice.

In conclusion, the study has shown that the research is important and that the objectives of the study have been achieved. The findings of the study are presented in a clear and concise manner, and the implications of the findings are discussed in detail. The paper concludes with a summary of the main points and a list of references.

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Summary of Phone Conversation with [REDACTED]  
October 21, 2010  
From: [REDACTED]

I called [REDACTED] to discuss the recent abuse activity at MIT, where someone managed to download approximately 450,000 articles from JSTOR. We spent approximately 40 minutes discussing this breach and its scale. [REDACTED] apologized on behalf of MIT and said they have been investigating the event with all resources at their disposal. [REDACTED] emphasized the value of JSTOR both as an asset and as a partner not for profit organization serving the scholarly community. [REDACTED] said several times that this was horrendous, dismaying, etc. They have also been very concerned about this for their own sake, because the scale of the effort had an impact on their network.

[REDACTED] outlined the procedures that MIT takes when these kinds of things occur. [REDACTED] said that these generally fall into one of two categories, what [REDACTED] called “inside the tent or outside the tent”:

1. Inside the tent: A faculty member/graduate student/undergraduate is downloading a ton of data for some kind of computer science project. They want to test out a robot, or they want to do some kind of data mining, or something, and they are just looking for a large corpus. These events are not about getting specific content; they are just about getting data.

Action: when they discover this kind of activity, they “bring the hammer down” on the person responsible, letting them know very clearly that such activity is not within the terms of the license and that they have to destroy all data collected in this way. In most cases, the person did not realize that doing such a thing is not allowed and everything gets taken care of very easily.

2. Outside the tent: Someone is trying to get the content and has hacked into MIT by overcoming a proxy, buying or otherwise stealing someone’s ID, etc. In these cases one cannot know the person’s intent but it is assumed to be nefarious. If this was the category for our case, [REDACTED] characterized this as “grand theft”. They take this very seriously.

I asked [REDACTED] what MIT is doing to figure out which situation applies for us.

They contact their IS&T group who analyze logs and work to track the origin of the activity, what seems to have been downloaded, and generally do everything they can to figure out what happened. In our case, to put it succinctly, they don’t know who did this. [REDACTED] said that the approach taken in our case was to exploit dynamic IP addresses. [REDACTED] said that in their IS&T investigation, it appears that the perpetrator opened a session, got the content, deleted cookies, closed session, etc. [REDACTED] said they seemed to be downloading the content in a systematic and sequential way. It didn’t seem to be aimed at getting specific content (from a particular journal or discipline) but just one after another. This was why they initially thought this might be some kind of computer science project.

They are trying to see if it was someone at MIT by asking people in the departments where such activity were likely to occur. [REDACTED] has spoken personally with key faculty in those departments to explain what happened and to ask if there were student or other projects underway that might

have led to this kind of activity. ■■■ has not heard back on this but is following up and will keep us posted.

If it is not within the tent, they really have no idea who could have done this or how to track them down. They also therefore obviously have no way of getting the data and destroying it. I specifically confirmed with ■■■ that it is a matter of not being able to find the person, and not a matter of MIT trying to protect the identity of the person (for privacy purposes, etc.) ■■■ said: "absolutely not, it is just not possible for us to identify them." We talked about the fact that this activity seems to have been systematic and sophisticated, and ■■■ wondered if these people were likely just to move on to other colleges or universities to exploit other softer security holes. We agreed that it would make sense to keep an eye out for this content to appear on the web somewhere.

We talked about the steps MIT has taken to prevent such an event from recurring. Essentially it amounts to driving everyone through an authentication step to make them verify their identity before they can get access to JSTOR. This would make it much harder to pull off an approach like this without leaving a trail, but it is not absolutely failsafe, as people can buy or steal identities. But it would make it much more difficult.

The problem with this approach is that it penalizes everyone for the actions of the few (or even one). With this in place all JSTOR users at MIT will have to submit to a ID/password challenge. This will make us look more protective and proprietary than other resources available on the MIT campus, since this approach will not be taken for all e-resources, but for a select few. We should try to find out what other resources are handled in this way.

I told ■■■ that I would consult internally and get back to ■■■ if there were next steps we needed to take. In the meantime ■■■ and ■■■ are working together on figuring out an implementation plan to address the situation in a mutually acceptable way.

---

Hi [REDACTED],

Wanting to make sure you are aware that I am working with [REDACTED] to determine the feasibility of [REDACTED] request. Off-hand, it's likely difficult if not impossible and is a frustrating response from [REDACTED] from my perspective. Most concerning is that they do not appear willing or desirous to address the pathway currently used for this purpose, the "guest access" and are pushing a sizeable amount of work and configuration on to us.

At worst I think we need to get a response to [REDACTED] early today, even if it is a generic "we are looking into it" message. I will plan to send out [REDACTED] summary and possible paths forward to the larger group this afternoon to try and help inform your CMG conversation as best I can. Please do let me know if additional background or information would be helpful.

Best,

[REDACTED]

Thanks, [REDACTED]. This is very helpful. It's something of a relief to see that the percentage download of all but a

few of the journals was de minimis and that the biggest percentage was 1/3. Obviously, not a great situation overall, but it could be worse.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

-----Original Message-----

From: [REDACTED]  
Sent: Tuesday, October 12, 2010 10:39 AM  
To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas

200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

11/11/2019

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard

drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Hi [REDACTED],

Wanting to make sure you are aware that I am working with [REDACTED] to determine the feasibility of [REDACTED] request. Off-hand, it's likely difficult if not impossible and is a frustrating response from [REDACTED] from my perspective. Most concerning is that they do not appear willing or desirous to address the pathway currently used for this purpose, the "guest access" and are pushing a sizeable amount of work and configuration on to us.

At worst I think we need to get a response to [REDACTED] early today, even if it is a generic "we are looking into it" message. I will plan to send out [REDACTED] summary and possible paths forward to the larger group this afternoon to try and help inform your CMG conversation as best I can. Please do let me know if additional background or information would be helpful.

Best,

[REDACTED]

Thanks, [REDACTED]. This is very helpful. It's something of a relief to see that the percentage download of all but a few of the journals was de minimis and that the biggest percentage was 1/3. Obviously, not a great situation overall, but it could be worse.

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Sent: Tuesday, October 12, 2010 10:39 AM

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

#### Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the

content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such.

This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Cc: [REDACTED]  
Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

Subject: MIT Update & Next Steps

Hi [REDACTED]

Wanting to make sure you are aware that I am working with [REDACTED] to determine the feasibility of [REDACTED] request. Off-hand, it's likely difficult if not impossible and is a frustrating response from [REDACTED] from my perspective. Most concerning is that they do not appear willing or desirous to address the pathway currently used for this purpose, the "guest access" and are pushing a sizeable amount of work and configuration on to us.

At worst I think we need to get a response to [REDACTED] early today, even if it is a generic "we are looking into it" message. I will plan to send out [REDACTED] summary and possible paths forward to the larger group this afternoon to try and help inform your CMG conversation as best I can. Please do let me know if additional background or information would be helpful.

Best,

[REDACTED]

-----Or

From: [REDACTED]

Thanks 

I took another look at the JIRA and [REDACTED]

114

From: [REDACTED]

Hi [REDACTED]

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

## Thanks

-----On

From: [REDACTED]

Thanks 

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit

surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Subject: Re: Update: JSTOR & MIT

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a

follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

Subject: Update: JSTOR & MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literaturum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

From: [REDACTED]  
Sent: Monday, October 11, 2010 12:47 PM  
To: [REDACTED]  
Cc: [REDACTED]  
Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

██████████

Thank You ██████████

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from

their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

> Dear [REDACTED]  
>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

**Subject:** MIT & JSTOR: Next Steps Discussion

---

Good Afternoon [REDACTED],

After speaking briefly with [REDACTED] this afternoon, we are both agreed that some technical conversation and discovery would serve both MIT & JSTOR well at this point. I am wondering if you might be available for a discussion with someone from our [REDACTED] staff next week to review your proposal and scope out what we might be able to do together to both prevent recurrence and to gain/share knowledge about configurations and the JSTOR/MIT interface going forward.

If that seems agreeable, I have blocked out some time on Tuesday afternoon (2-4 pm) next week. If this time frame doesn't work for you, please feel free to suggest alternate times and we'll be happy to accommodate. It seems, at the outset, one hour will be sufficient to determine actionable next steps.

Thanks,

**To:** [REDACTED]  
**Cc:** [REDACTED]  
**Subject:** RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED], I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

18.51.1.222  
18.7.29.240

Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] [REDACTED] as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

We look forward to moving forward with an econtrol implementation with or without the apache code --

Thanks very much,  
[REDACTED]

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Thanks [REDACTED].

I appreciate your candor here. I have dealt with many cases over the years and understand the difficulties inherent with tracking down individual users. I am hopeful we can use this opportunity to work together towards building more stable, sustainable and secured access to JSTOR. We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

18.\*.\*.\*  
128.30-31.\*.\*  
128.52.\*.\*  
129.55.\*.\*  
192.52.61-66.\*  
198.125.160-163.\*  
198.125.176-192.\*

Hello [REDACTED], I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Dear [REDACTED],

I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Best,

Hello ██████████ and ██████████,

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with ██████████ ██████████, copied here.

Best,

[REDACTED]

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED], I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

18.51.1.222  
18.7.29.240

Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

198.125.176-192.\*

Subject: RE: 10:00 am Update: JSTOR Abuse at MIT: All IPs Blocked

Hello [REDACTED], I wanted to give you an update before the weekend.

At this time we have gone as far as we can in identifying the individual involved in these incidents. Our records and logs related to this activity do not allow us to definitively identify the guest. We appreciate your offer of more granular log information, but our IS&T group does not believe that such files will allow us to reach the point of identification.

We can, however, take a significant step to prevent recurrence by moving to the new protocol I'd mentioned below. Since it sounds as if that would be welcome and workable on the JSTOR end, I hope we can pursue that next week.

I would be happy to discuss any aspect of this with you further, and I'm sorry we do not have more details to report in terms of the incidents.

[REDACTED]

[REDACTED]

[REDACTED]

MIT Libraries

P [REDACTED]

[REDACTED]@mit.edu

<http://libraries.mit.edu/scholarly>

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

-----

This seems to be a complex solution to a simple problem. Most companies/organizations do this type of work with software like proxy servers or web filters that would catch the outgoing request and re-route it through the proxy.

There are, right now, unknown costs to a solution like this and we would need to spend some time to understand the impacts. We would need to know how to prioritize this with the current work that is on our plates for CSP.

**Subject:** MIT & JSTOR: Next Steps Discussion

---

Good Afternoon [REDACTED]

After speaking briefly with [REDACTED] this afternoon, we are both agreed that some technical conversation and discovery would serve both MIT & JSTOR well at this point. I am wondering if you might be available for a discussion with someone from our [REDACTED] staff next week to review your proposal and scope out what we might be able to do together to both prevent recurrence and to gain/share knowledge about configurations and the JSTOR/MIT interface going forward.

If that seems agreeable, I have blocked out some time on Tuesday afternoon (2-4 pm) next week. If this time frame doesn't work for you, please feel free to suggest alternate times and we'll be happy to accommodate. It seems, at the outset, one hour will be sufficient to determine actionable next steps.

Thanks,

[REDACTED]

Thanks [REDACTED],

I appreciate your candor here. I have dealt with many cases over the years and understand the difficulties inherent with tracking down individual users. I am hopeful we can use this opportunity to work together towards building more stable, sustainable and secured access to JSTOR. We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

**Subject:** Re: MIT & JSTOR: Next Steps Discussion

---

Hi [REDACTED] (and everyone),

That sounds terrific. I look forward to discussing possible scenarios and doing some information sharing. I have a project review meeting on Tuesday with my portion concluding at 1:30 -- I should be able to make a 2:00 without issue however, if I run slightly behind, I'll let all know. Enjoy the weekend.

Best,

[REDACTED]

> Hello [REDACTED], I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

>

> We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

>

> When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

> 18.51.1.222

> 18.7.29.240

>

> Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

>

> Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

>

> I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] [REDACTED] as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

>

> In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

>  
> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.  
>  
> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient

robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>  
> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>  
> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

>  
> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>  
> If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

---

Hi [REDACTED]

Looks to me like this is the second abuse event -- 8,510 articles. Did [REDACTED] do a similar effort for the first abuse event of 500k?

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We

have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

#### Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost

always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Subject: RE: Update: JSTOR & MIT

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard

to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be

anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

Subject: Re: Extreme robotic activity of JSTOR at MIT

Thanks [REDACTED],

There was one Facebook post at midnight, a normal user from MIT (at least via his profile he lists the MIT Network in Facebook), having trouble. I have not responded, wanting to give MIT at least the morning to touch base. Still no word from MIT.

Looping in [REDACTED], [REDACTED] and [REDACTED]. I brought them up to speed last night.

>

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

---

Total oversight on my part, thanks. I'll get with [REDACTED] this morning...

[REDACTED]

Hi [REDACTED]

Looks to me like this is the second abuse event -- 8,510 articles. Did [REDACTED] do a similar effort for the first abuse event of 500k?

[REDACTED]

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact

law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even

more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

11/11/2016

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with

our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Subject: RE: Update: JSTOR & MIT

Thanks ,

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.
  - a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

## Access Suspended

Access to JSTOR from your current IP address ( ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

- b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and quality of life of older people. The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in the activities of their communities.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end

and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are

any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

So the breakdown of percentages we saw was for the 8,500 articles, not the 500K articles? I'm looking back at the chart now and see that the # of article adds up to far less than 500K (and does it even add up to 8,500?).

We most definitely want to see the analysis for the 500K articles (had thought that's what I was looking at).

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out,

never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and

keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Agreed. I have reopened the JIRA item as Urgent (it has always been flagged as Urgent) and pinged [REDACTED] through Outlook. We'll turn the data around ASAP. The number of articles in the spreadsheet provided = 8510 and does represent the 10/6 incident.

So the breakdown of percentages we saw was for the 8,500 articles, not the 500K articles? I'm looking back at the chart now and see that the # of article adds up to far less than 500K (and does it even add up to 8,500?).

We most definitely want to see the analysis for the 500K articles (had thought that's what I was looking at).

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Subject: RE: Update: JSTOR & MIT

Thanks .

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literaturum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and

begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so,

are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

So the breakdown of percentages we saw was for the 8,500 articles, not the 500K articles? I'm looking back at the chart now and see that the # of article adds up to far less than 500K (and does it even add up to 8,500?).

We most definitely want to see the analysis for the 500K articles (had thought that's what I was looking at).

Hi [REDACTED]

Looks to me like this is the second abuse event -- 8,510 articles. Did [REDACTED] do a similar effort for the first

this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED].

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from

end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this

circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

So the breakdown of percentages we saw was for the 8,500 articles, not the 500K articles? I'm looking back at the chart now and see that the # of article adds up to far less than 500K (and does it even add up to 8,500?).

We most definitely want to see the analysis for the 500K articles (had thought that's what I was looking at).

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came

in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30

consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

15 JULY 2004

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

From: [REDACTED]

Sent: Tuesday, October 12, 2010 10:39 AM

To: [REDACTED]

Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

#### Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible

and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The methodology section describes the research design and the data collection process. The results section presents the findings of the study, and the conclusion section summarizes the main findings and provides recommendations for future research.

The study was conducted in a laboratory setting. The participants were recruited from a local university and were assigned to two groups: the experimental group and the control group. The experimental group received the intervention, while the control group did not. The data was collected over a period of six weeks.

The results of the study show that the intervention had a significant positive effect on the outcome variable. The experimental group showed a significant improvement in the outcome variable compared to the control group. The findings suggest that the intervention is effective in improving the outcome variable.

The conclusion of the study is that the intervention is effective in improving the outcome variable. The findings suggest that the intervention is a promising approach for improving the outcome variable. Further research is needed to confirm the findings and to explore the long-term effects of the intervention.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

[REDACTED]

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED].

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED]

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED]

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the

course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in a 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED]

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

Best,

Subject: RE: Update: JSTOR & MIT

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

**Subject:** RE: MIT & JSTOR: Next Steps Discussion

---

Thanks [REDACTED].

I scheduled the meeting for 2-3 pm tomorrow and invited [REDACTED], our [REDACTED] to attend. I have also copied [REDACTED] here. I am thinking that [REDACTED] and I may way to be on the call as well, but really looking to merely facilitate an open discussion between yourself and [REDACTED]. You are more than welcome to extend an invite to others at MIT that might prove helpful in the discussion as well. Looking forward to our conversation.

The dial in number is [REDACTED].

Best,

[REDACTED]

**Subject:** Re: MIT & JSTOR: Next Steps Discussion

Hi [REDACTED] (and everyone),

That sounds terrific. I look forward to discussing possible scenarios and doing some information sharing. I have a project review meeting on Tuesday with my portion concluding at 1:30 -- I should be able to make a 2:00 without issue however, if I run slightly behind, I'll let all know. Enjoy the weekend.

Best,

[REDACTED]

> Good Afternoon [REDACTED],

>

> After speaking briefly with [REDACTED] this afternoon, we are both agreed that some technical conversation and discovery would serve both MIT & JSTOR well at this point. I am wondering if you might be available for a discussion with someone from our [REDACTED] staff next week to review your proposal and scope out what we might be able to do together to both prevent recurrence and to gain/share knowledge about configurations and the JSTOR/MIT interface going forward.

>

> If that seems agreeable, I have blocked out some time on Tuesday afternoon (2-4 pm) next week. If this time frame doesn't work for you, please feel free to suggest alternate times and we'll be happy to accommodate. It seems, at the outset, one hour will be sufficient to determine actionable next steps.

>

> Hello [REDACTED], I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our

discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

>

> We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

>

> When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

> 18.51.1.222

> 18.7.29.240

>

> Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

>

> Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

>

> I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] [REDACTED], as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

>

> In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

We are meeting as a larger group to discuss this matter further this afternoon and I am wondering if you could provide one point of clarification for that conversation.

>

> Understanding that you may not be able to identify the individual, where you able to identify the credentials used to access MIT authorization for this activity? That is, was there a shared UN/PW used for guests or an open port on a proxy used in this case. Basically, the concern is, as we sort out the IP configurations necessary with you, could this or any user use the same authorization methodology to do this again or has the pathway been identified and locked down?

>

> As for your IP configurations and establishing an access point within your range. We have the following IP addresses currently installed for MIT. Please let me know which ones to maintain and which to remove as needed and we'll get right to it.

> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to

assist.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

>

> Dear [REDACTED],

>

> I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

[REDACTED]

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Thanks [REDACTED]

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED].

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible.

For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

Best,

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

---

[REDACTED],

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

[REDACTED]

## My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

Thanks [REDACTED].

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Subject: RE: Update: JSTOR & MIT

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

11/11/2019

Subject: Update: JSTOR & MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED].

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

To: [REDACTED]  
Cc: [REDACTED]  
Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open

Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> Dear [REDACTED]

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED]

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

[REDACTED]

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422  
Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED]

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED]

Subject: Update: JSTOR &amp; MIT

Just a quick update...

██████████ is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with ██████████ keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

██████████ at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED].

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.
  - a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

## Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

- b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.
2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literaturum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in a 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED]

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

[REDACTED]

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if an when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

For the future, what happens when we deny an entire site (from an end user perspective) -- what message do users receive? Is there any opportunity to customize? How frequently do we have to take action at this scale?

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED]

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China,

Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

11/11/2019

> Dear [REDACTED]  
>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED]

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4

articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

11/11/2019

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

114

Thanks [REDACTED],

I took another look at the JIRA and [REDACTED] has already compiled that data. I threw it in Excel and sorted by percentage taken (see attached). If there is other information that would be of use in analyzing our approach, don't hesitate to ask.

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05.06.49.109524 PM  
End = 26-SEP-10 04.24.54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since

the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

To: [REDACTED]  
Cc: [REDACTED]  
Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ( [REDACTED] ) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas

200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>

> Dear [REDACTED]

>

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED],

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

[REDACTED]

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some

significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to

change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to

provide them.

Thanks,

11/11/2016

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

[REDACTED]

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

>  
> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED]

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,

[REDACTED]

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Subject: Update: JSTOR & MIT

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215  
Start = 25-SEP-10 05:06:49.109524 PM  
End = 26-SEP-10 04:24:54.297995 AM  
Total Sessions = 1,256,249  
Total Articles Downloaded = 453,570  
Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100  
Start = 2010-10-09 14:53:18 from  
End = 2010-10-09 19:08:01  
Total Sessions = 8,515  
Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED] copied here.

Best,

[REDACTED]

Thank You [REDACTED],

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the

incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the users password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on a incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

██████

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

-----Original Message-----

From: [REDACTED]

Sent: Tuesday, October 12, 2010 10:39 AM

To: [REDACTED]

Cc: [REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Done.

Dear [REDACTED] & [REDACTED],

Good evening. I am hoping to hear additional news from you about the status of this weekend's block of IPs for JSTOR access at MIT. We are beginning to receive feedback from MIT users on our Facebook page and via direct email and we would like to be able to let them know the current status of the IP denial and an expected timetable for resolution. We are reticent to do so having not heard from you. A progress report on this incident would be helpful to assist us in better serving our mutual patrons.

Again, please do let me know if I can assist further from our end and I'll be glad to do so.

Best,

[REDACTED]

I would let our MIT contacts know immediately that we are hearing directly from end users and how they would like us to respond. We don't want this discussion to go viral on Facebook, etc., so my advice is to try to avoid direct responses about robots and such. This could result in criticism in both directions that could be hard to stop.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a

passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We

worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

[REDACTED]

Can you elucidate for me how the column called "Total Articles" is derived? I know that seems like an incredibly basic question about what should be obvious terminology, however, when I actually look down the list, many of the numbers seem suspiciously low. It's an important number because it drives the percentage loss calculation, so it is important that these are right. Just for one example, my heart palpitates when I see that the Bulletin of the College Art Association was among the victims of the 9/25 theft, and our calculation is that 50% of their articles were downloaded! But the actual numbers say that 2 articles were downloaded out of a total of 4. It just so happens that the Bulletin was a short lived title - it changed name shortly after it started, so I could imagine that the count only looks at the underlying title and doesn't roll up to the full history of that title (though that might be a more appropriate way for us to look at these numbers). But I still can't reconcile a count of 4 articles. I only looked at the ToC for issue #4, and it had 23 articles in it. Is it possible that this count is really referring to a number of issues, and not the number of articles?

Seems important that we have a better understanding of the numbers before we decide how to work with MIT about this.

Best,

My Apologies All,

The sheet originally provided only contained the 10.9 incident (8510 downloads), not the 9/25 incident (400K downloads). Somewhere between Mac --> JIRA --> PC the sheet with the original incident got dropped.

Please find the revised document attached with one sheet for each incident.

Thanks,

Hi [REDACTED],

Can you provide info on the content involved here. 562 journals were affected. Were there instances in which the entire back run, or most of the back run, of a journal was affected? If so, which ones? 453,000 articles is approximately 7% of the articles in our

database; this is significant, but beyond this, and depending on what specifically was downloaded, it also could be 97% of a publisher's -- or many publishers -- content....

Thanks,  
[REDACTED]

Thanks [REDACTED],

We are agreed, the number is staggering and real theft. I also agree that we should pursue a much more extensive resolution and want to be a facilitator here as best I can, until others are ready to liaise with our contacts there as needed. Given their response thus far, and given historical cases, it resembles language and approach that suggest they have not as yet and perhaps cannot identify the user. It is not terribly uncommon that this is the case, but usually big infrastructure translates into a much more exacting reply, so I am a bit surprised by where it stands at present. You'll see in my correspondence with them, I am trying to get clarification on that issue. If they are able to identify the user, we can discuss what steps seem appropriate based on their response.

I have not made them aware of the numbers from the 9/25, 9/26 or 10/9 incidents as they just came in, but am seeking to do so shortly in the hopes that the urgency and gravity translates directly.

Thanks for this update, [REDACTED]. This is all exactly right. In addition, I'd like to understand from the university how it manages these type of incidents on a broader scale. This is an astronomical number of articles -- again, real theft (and one can assume willful malfeasance given the use of a robot, etc.). Does the university contact law enforcement? Would they be willing to do so in this instance?

Good Morning,

We have received word back from MIT. I am including their email and my response as well (see below). That is where we stand at the moment.

For those of you following OPS-1843, Quantify MIT Abuse Cases, you'll see that some startling numbers came in last night. The good news is that the latest incident was contained much more quickly. That said, some significant work to be done yet. Summarizing here.

Incident on 9/25 & 9/26

IP = 18.55.6.215

Start = 25-SEP-10 05:06:49.109524 PM

End = 26-SEP-10 04:24:54.297995 AM

Total Sessions = 1,256,249

Total Articles Downloaded = 453,570

Total Journals Affected = 562

Comments: This is an extraordinary amount and blows away any recorded abuse case that I am aware of since the CASS days.

Incident on 10/9

IP = 018.055.005.100

Start = 2010-10-09 14:53:18 from

End = 2010-10-09 19:08:01

Total Sessions = 8,515

Total Articles Downloaded = 8,422

Total Journal Affected = 714

Comments: Noticed quicker, dealt with quicker.

Correspondence as of yesterday...

Hello [REDACTED] and [REDACTED],

Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

We would orchestrate this change by changing the proxy configuration on this end, and then we'd ask you to change the list of acceptable MIT IPs to only our proxy server's address -- a single IP.

If this sounds like an acceptable approach, let's discuss the next steps. To carry out the change, I'd have JSTOR work with [REDACTED], copied here.

Best,

[REDACTED]

Thank You [REDACTED].

I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.
2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.
3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

Thanks,

[REDACTED]

Subject: Update: JSTOR & MIT

Just a quick update...

[REDACTED] is compiling the last of the stats surrounding these two incidents. All IP addresses have been restored for access to JSTOR at MIT with [REDACTED] keeping a watchful eye for recurrence. I have been in contact with our contacts at MIT and they are very helpful. Once we have the IPs and date stamps from our logs, I will be requesting a summary from their side, an outline of steps taken and passing along our summary to you all.

[REDACTED] at MIT is very appreciative of our efforts here and was not upset that their IPs had been blocked, but seeking, as we all are, to have full reinstatement and activity return to normal with the requisite accountability. We will continue working together toward that end.

[REDACTED]

-----Original Message-----

From: [REDACTED]

Sent: Tuesday, October 12, 2010 10:39 AM

To: [REDACTED]

Cc: [REDACTED]

Subject: RE: Update: JSTOR & MIT

Thanks [REDACTED],

First, let me take the opportunity to clarify the two versions of this that occur...

1. An institution trips one of our abuse threshold (300 PDFs in one session, 5000 sessions in one hour), there individual IP is blocked for 30 minutes.

a. Users from that IP address (sometimes a proxy serving the whole campus, sometimes just one IP address) will see the standard error page that was created last August as we implemented abuse tools...

Access Suspended

Access to JSTOR from your current IP address ([REDACTED]) has been suspended. We will be in contact with the administrators at your institution directly and will work to have access restored as quickly as possible. For more information, please contact JSTOR Support.

...If the activity occurs just once, we consider the issue resolved and the message effective in outlining the Terms & Conditions of Use for the end user. If the blocking recurs for that institution, we typically get a hold of the institution and seek correspondence and resolution. Long term cases at institutions are fairly rare and usually don't persist day in and day out, but occur a few times over the course of a few weeks until the institution can get it resolved. Each block basically = 300 PDFs, which means a small amount of the archive is leaking out, never en masse.

b. This particular case highlights that our 5000 session limit (implemented as a response to MIT on 9/29) is calculated per IP AND per server. We were under the impression that it would be applied per IP only, which would have caught this 2nd incident. We will use the data derived from this incident to put a limit in place that accounts for the per IP, per server metric.

2. In the MIT case, the Class A range was blocked, at [REDACTED] request, at the firewall level. This was necessary because the traffic itself, even if denied the ability to download PDFs, was so intense it would have had the same effect on our server stability. In this case, users are seeing...

"Server not found. Firefox can't find the server at www.jstor.org."

...because it is not implementing the Literatum abuse tools, but is blocked at the firewall.

In summary and answering your questions directly. I can only recall one other time that [REDACTED] blocked an IP at the firewall. It wasn't abuse, but it was a robot gone haywire, downloading the same PDF at a wild rate and beginning to threaten our capacity to serve the public site on some servers. We can alter the message that users see when IPs are blocked, but it is a one size fits all solution. We cannot alter what users see when their IP is blocked at the firewall.

It is perhaps useful to note that the librarians we are in contact with are rarely defensive or irritated, and almost always shocked, embarrassed and apologetic. These are also the same librarians that we sell our content to. Our basic approach is to leave them with the impression that we are simply being good stewards of the content and using reasonable means to do so. Blanket IP range blocks and excessive force are to be avoided when possible and are not necessary 99% of the time. Once the librarian understands the different pieces of the abuse puzzle, they are very cooperative and looking to help.

That said, it is a useful exercise to understand the nature of the problem here. By doing a simplified Chinese language Google search on "EZProxy password", you will find numerous lists with valid authentication information for hundreds if not thousands of schools. I copied the contents from a random site on the first page of results found using this search below just now. The number of sites like these are legion. So it's not that the librarian or technical staff are able to stem this tide either and we need to understand their position as well. We need to be level headed and even handed. This particular MIT case is extremely abnormal.

All that said, with CSP on our doorstep, it would be a valuable enterprise to understand our partner's expectations for protection of their content and to help them understand our capabilities and limitations as well. In some cases, we will be doing more to protect the content than they have historically, in others, because our usage is so high, it will be hard to match their efforts because the abuse tools don't scale particularly well to both prevent excessive downloading and maintain access for legitimate users. Proxied access is especially hard in this regard. That is, you could easily imagine a larger school having 200 unique sessions from one IP (proxy) in an 5 minute span (a professor assigning one article in a large lecture could hit this mark in isolation), whereas 200 sessions in a 5 minute period from the same IP at the UC Press website might look like an onslaught.

In case, once MIT is resolved, we will have to circle back and at least breakdown what our protocols should be going forward and begin to scope the CSP engagement with regards to abuse at JSTOR.

Subject: RE: Update: JSTOR & MIT

Good Evening,

By way of an update, we have one email and one Facebook post referencing the outage at MIT, both are from end users and are of the wondering what's up and giving us an FYI variety. Having not heard from MIT officially today, I am suggesting we respond to both users with the following...

Thanks for alerting us to the issue with JSTOR access and MIT. Over this past weekend, robotic activity was noticed at JSTOR that is in violation with our Terms & Conditions of Use. The scope of this activity required us to deny access to JSTOR for all of MIT until it can be resolved.

We are in communications with the library and technical staff at MIT and expect resolution shortly. Please accept our apology for any inconvenience this may have caused. We are working to restore JSTOR access to MIT as quickly as possible and anticipate a resolution shortly.

... but welcoming suggestions. We can also refer them to their librarian, but note that this can be seen as a passive aggressive step from their end, though it would provide additional pressure on them, and is usually reserved for the completely non-responsive official contacts.

No doubt, the correspondence thus far from them would seem to be direct and agreeable, but no word from them today. From the incident on 9/25 and 9/26, they confirmed resolution on the 29th, so it might be expected to take a day or two, but that was only denying a small subset of their range and this is much, much larger.

I will reach out again, directly, first thing tomorrow morning, just to make sure they are in receipt on their end and action is being taken. Without additional word directly from MIT or anyone on this email chain, I will respond to the two users others going forward as stated above by 10pm EST.

Best,

[REDACTED]

Thanks, [REDACTED].

Does sound quite probable that this is an open proxy issue. I suggest we also ask MIT to scan for other open proxies, given that we had a situation with them a couple of weeks ago as well. If it's not an open proxy (that is, if the infringer is on-site or locatable/identifiable), I'd like -- as you already note -- confirmation of deletion of harvested content. I'd like to understand with some specificity how they go about obtaining this confirmation and ascertaining its veracity. And, how do they "deal with" these situations, beyond requesting confirmation of deletion? Are they able to tie the activity to a former "visiting scholar" or other individual? If so, are they willing to work with us to pursue more stringent law enforcement efforts (I'm not saying that we would in this circumstance, but I'm not necessarily satisfied with letting things go simply because the activity "stopped"; again, this is industrial theft and it's happening on a large scale or organizations all over). Also, open proxy is one risk and we should consider what if any follow up is possible re tracking down the content stolen from locations far away, but I also have real concerns about our content being downloaded more locally to hard drives or exported elsewhere. So, there may be different follow up depending on the type of infringement occurring.

In any event, this is one of the reasons for wanting to implement discrete watermarking or identifiers, should we in time find our content re-purposed by other sites.

Subject: Update: JSTOR & MIT

Afternoon Update,

Still no word from MIT, but I suspect it will come shortly. That said, and wanting to be prepared, if there are any details or contingencies for reinstatement, we should be developing those now. They will likely come back and say it's taken care of again. They may or may not offer a reason. An immediate recurrence is highly unlikely, whether they have truly taken care of it or not, so it will be hard to solicit proof.

If I were forced to guess, I think they will report back that they identified a compromised User Name and Password and a bunch of referring access from IPs around the globe (typically some combination of China, Russia, and a smattering of Eastern European, Asian and South American origins). Some schools think that blocking those referring IPs is sufficient, which it is not, but isn't a bad

addition. Hackers generally use Open Proxies to fake their actual location and can find an alternate Open Proxy to use quite readily. Only changing the password or disabling the offending Username and Password is an acceptable solution.

In cases like these, we ask them to confirm that the identity responsible has been dealt with, we also ask that they confirm deletion of harvested content, but if it is from a referring IP abroad, this user could be anyone/anywhere.

Anyway, if there are special requests or requirements to gain reinstatement, we should have them at the ready.

Thanks,

[REDACTED]

Thanks [REDACTED].

There was one Facebook post at midnight, a normal user from MIT (at least via his profile he lists the MIT Network in Facebook), having trouble. I have not responded, wanting to give MIT at least the morning to touch base. Still no word from MIT.

Looping in [REDACTED]. I brought then up to speed last night.

>

> I wanted to let you know about an extreme step we have taken this evening. Our staff have blocked access to JSTOR from MIT. This is a highly unusual step and one we do not take lightly. We have had to do so because someone is systematically attempting to download large parts of the JSTOR database from within MIT's IP range. They use robots to open a session, download a PDF, open a new session, download another PDF, and keep repeating at a high rate. Not only is this a problem because it is beyond the terms of the license, but the downloading is so extensive that it impacts other users and has even brought some of our servers down. We worked through a similar incident at MIT three weeks ago and thought that the activity was being done by a visiting scholar who had left. But it has started again at an even faster rate. I am not writing you to complain about the activity; I just wanted you to be aware of the extreme step we have taken and why.

Thanks [REDACTED]

I scheduled the meeting for 2-3 pm tomorrow and invited [REDACTED], our [REDACTED], to attend. I have also copied [REDACTED] here. I am thinking that [REDACTED] and I may way to be on the call as well, but really looking to merely facilitate an open discussion between yourself and [REDACTED]. You are more than welcome to extend an invite to others at MIT that might prove helpful in the discussion as well. Looking forward to our conversation.

The dial in number is XXXXXXXXXX

Best,

□

Subject: Re: MIT & JSTOR: Next Steps Discussion

Hi [REDACTED] (and everyone),

That sounds terrific. I look forward to discussing possible scenarios and doing some information sharing. I have a project review meeting on Tuesday with my portion concluding at 1:30 -- I should be able to make a 2:00 without issue however, if I run slightly behind, I'll let all know. Enjoy the weekend.

Best,

> Hello , I apologize for the delay in responding. I have been waiting for more detail from our IS&T group, but I still don't have that information. In the meanwhile, I am hoping we can move forward with our

discussions to make the technical changes necessary to implement our additional authorization layer, which we call "econtrol."

>

> We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

>

> When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

> 18.51.1.222

> 18.7.29.240

>

> Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

>

> Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

>

> I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED] as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

>

> In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group needs additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

> I am wanting to keep you up to date on our findings here. I am copying an incident summary below for the two occurrences. I am hopeful that you understand our urgency as not intended to be confrontational at all, but as rooted in our deep investment in our ability to be good stewards of the content in our care. Noting that, the 9/25 and 9/26 incidents yielded more than 400K PDFs from JSTOR to this user. This is both unprecedented and very concerning. Any progress you could provide on identifying the user responsible and the steps I mentioned yesterday would be very helpful.

>  
> We are also mindful that the weekend is upon us and are looking for collaboration on your end and acknowledgement that MIT staff will be monitoring your systems closely for any recurrence, as we are, until we can reach resolution.

>

> Hello [REDACTED] and [REDACTED],

> Our investigations here point to the same guest that was involved in the 9/27 incident. We don't have enough information to follow the trail completely, but the signs suggest that the same guest user was responsible for this latest activity. To pursue this further, our IS&T group would need more information. Specifically, they are wondering if you are seeing any robotic activity from MIT currently and if so, whether you have any information about the IP addresses involved.

>

> Given that it appears all of this excessive use was caused by a guest visitor at MIT, we have been considering next steps, and would like to suggest that we move to a new access model that will eliminate use by guests. We have recently developed an additional authorization layer that we can apply to particular products to prevent access by guests/walkins. We've tried this approach with one or two publishers where we had seen repeated excessive use, and it has stemmed the problem in those cases.

Atypon support request for scripting at Literatum Admin Tool Sessions Abuse Rule  
-----

Key: OPS-1891

URL: [http://\[REDACTED\]](http://[REDACTED])

Project: Operations

Issue Type: Task

Reporter: [REDACTED]

Assignee: [REDACTED]

Priority: Medium

Summary: I turned the sessions by time abuse rule on to in the week after the MIT abuse recurred and the 5000 by hour caught nothing.

Rule: 1000 sessions per IP per hour = permanent block

Caught a fish in Southwest Jiatong University who were in the middle of a "trial". Only one of their many IPs that also got busted by the 300 PDF download rule. We shut down the trial and slapped them on the wrist, but I digress.

I went to unblock the 1000 sessions fella and got a Literatum based error. See screen shots and details in the Bugzilla [http://\[REDACTED\]](http://[REDACTED]) [REDACTED] is asking to run a SQL query and may need to dig deeper. Can one of you wonderful gents assist me here.

Impact: None right now, that IP can't access JSTOR and they aren't participants, but I am reticent to implement the rule until we can unblock those that get jacked. I believe we could get to a pretty low threshold that might catch MIT or MITesque activity, but I need to ratchet down further to get there.

For Fun: Can the same someone take a look at the block itself. It would be helppful to have an expert opinion on whether this fired on a per server or per server center basis. Assuming we are safe in presuming it doesn't account for MDC since MIT had no issues with the 400K.

For Style: Under what component should this live?

[REDACTED] commented on OPS-1843:  
-----

OK, more on the nature of the 9/25-9/26 attack...

Much larger than the 10/09 attack, this appears to have also been going after the entire corpus, spawning sessions beginning with a particular DOI, and instructing the session to download articles sequentially. When a particular session fails, a new one is spawned at the # where the previous one died. The order in which journals were targeted was haphazard, but sessions follow the same pattern - beging with a DOI, and increment it by 1, ad infinitum, until failure.

As there were 1.2MM sessions, with only ('only') 451K downloads, the session failure rate was obviously fairly high, which is likely a by-product of: 1) our abuse controls; and, b) gaps in the number sequence in our DOI list (i.e., the bot hits the next number in a sequence, but we have no article with that DOI).

Still working on a title-history roll-up version of the listing in the spreadsheet.

**Subject:** MIT Conversation Summary & Abuse Methodology from [REDACTED]

---

Good Evening,

I wanted to provide an update from the conversation we had with MIT this afternoon. [REDACTED] and I spoke with their primary contact, their [REDACTED] and their [REDACTED]. It was a pleasant and engaged conversation with some meaningful outcomes.

#### Incident Update:

1. They confirmed that they believe the activity took place on campus. Based on their analysis of the IP addresses used, and as they explained it, they are convinced that this is the case. This is good news in that the individual might still be identified and the material recovered.
2. They are continuing their efforts to identify the individual(s) responsible. As a side note, I was paying particular attention to this point as their [REDACTED] addressed it. I get the impression that [REDACTED] means it and I also get the feeling [REDACTED] has active leads, though [REDACTED] didn't share them.

They were cognizant of the problem that the volume taken here poses and expressed understanding about our ongoing concerns. As we discussed possible next steps they hinted at infrastructure changes, already in the works prior to our issue, that this event, combined with others, would help facilitate.

#### Next Steps:

1. They understood the difficulties that MDC and multiple servers would pose for their proposed solution and we quickly moved on to the next solution. They did confirm that a half dozen other vendors are set up this way, but didn't mention which ones and said that it was sometimes contractually required by the vendor. I brought it up twice, asking about similar sized vendors or content delivery sites, but they weren't forthcoming about which ones and I didn't press the somewhat moot point, since we weren't going there.
2. [REDACTED] proposed a potential solution, using a visual prompt for MIT students not arriving at JSTOR through their proxy that directs them through the MIT login process. This was seen as a nice alternative from MIT's perspective and we agreed to develop a proto-type on our side. From my understanding, this functionality would work like the overlay that was used for the MyJSTOR Beta and requires a little work on [REDACTED] part, but nothing major and no web site 'development' work.

This solution doesn't really scale, but their situation is very unique. That is, there is no one of their size as an academic institution, bandwidth/IP range wise, and I don't know of any other institution configured this way. It's odd. They recognize this too and said as much, attributing it to a history of open access on campus that integrates less and less gracefully.

I will keep you updated as we learn more and make progress against the proto-type.

■■■■■ summary of the pattern from 9/25 is as follows. Title roll-up work is continuing.

The robot was spawning sessions beginning with a particular DOI, and instructing the session to download articles sequentially. When a particular session failed, a new one was spawned at the # where the previous one died. The order in which journals were targeted was haphazard, but sessions follow the same pattern - beginning with a DOI, and incrementing it by 1, ad infinitum, until failure.

As there were 1.2MM sessions, with only ('only') 451K downloads, the session failure rate was obviously fairly high, which is likely a by-product of: 1) our abuse controls; and, 2) gaps in the number sequence in our DOI list (i.e., the robot hits the next number in a sequence, but we have no article with that DOI).

Best,

■■■■■

**Subject:** MIT Conversation Summary & Abuse Methodology from [REDACTED]

Good Evening,

I wanted to provide an update from the conversation we had with MIT this afternoon. [REDACTED], [REDACTED] and I spoke with their primary contact, their [REDACTED] and their [REDACTED]. It was a pleasant and engaged conversation with some meaningful outcomes.

Incident Update:

1. They confirmed that they believe the activity took place on campus. Based on their analysis of the IP addresses used, and as they explained it, they are convinced that this is the case. This is good news in that the individual might still be identified and the material recovered.
2. They are continuing their efforts to identify the individual(s) responsible. As a side note, I was paying particular attention to this point as their [REDACTED] addressed it. I get the impression that [REDACTED] means it and I also get the feeling [REDACTED] has active leads, though [REDACTED] didn't share them.

They were cognizant of the problem that the volume taken here poses and expressed understanding about our ongoing concerns. As we discussed possible next steps they hinted at infrastructure changes, already in the works prior to our issue, that this event, combined with others, would help facilitate.

## Next Steps:

1. They understood the difficulties that MDC and multiple servers would pose for their proposed solution and we quickly moved on to the next solution. They did confirm that a half dozen other vendors are set up this way, but didn't mention which ones and said that it was sometimes contractually required by the vendor. I brought it up twice, asking about similar sized vendors or content delivery sites, but they weren't forthcoming about which ones and I didn't press the somewhat moot point, since we weren't going there.
2. [REDACTED] proposed a potential solution, using a visual prompt for MIT students not arriving at JSTOR through their proxy that directs them through the MIT login process. This was seen as a nice alternative from MIT's perspective and we agreed to develop a proto-type on our side. From my understanding, this functionality would work like the overlay that was used for the MyJSTOR Beta and requires a little work on [REDACTED] part, but nothing major and no web site 'development' work.

This solution doesn't really scale, but their situation is very unique. That is, there is no one of their size as an academic institution, bandwidth/IP range wise, and I don't know of any other institution configured this way. It's odd. They recognize this too and said as much, attributing it to a history of open access on campus that integrates less and less gracefully.

I will keep you updated as we learn more and make progress against the proto-type.

[REDACTED] summary of the pattern from 9/25 is as follows. Title roll-up work is continuing.

The robot was spawning sessions beginning with a particular DOI, and instructing the session to download articles sequentially. When a particular session failed, a new one was spawned at the # where the previous one died. The order in which journals were targeted was haphazard, but sessions follow the same pattern - beginning with a DOI, and incrementing it by 1, ad infinitum, until failure.

As there were 1.2MM sessions, with only ('only') 451K downloads, the session failure rate was obviously fairly high, which is likely a by-product of: 1) our abuse controls; and, 2) gaps in the number sequence in our DOI list (i.e., the robot hits the next number in a sequence, but we have no article with that DOI).

Best,

---

[ [http://\[REDACTED\]](http://[REDACTED]) ]

[REDACTED] commented on OPS-1845:

-----  
Based on the latest conversation with MIT, here are the steps:

- 1) Work with MIT to add/ensure access to their proxy
- 2) create an Ad directed to MIT that will alert users to go to the proxy and sign in
- 3) Remove all but the proxy IPs from MITs access range

> Restore MIT IP Addresses

> -----

>

> Key: OPS-1845

> URL: [http://\[REDACTED\]](http://[REDACTED])

> Project: Operations

> Issue Type: Task

> Reporter: [REDACTED]

> Assignee: [REDACTED]

> Priority: Urgent

>

> [REDACTED] is asking that the MIT range be restored. [REDACTED] asked that we take a metered approach and ease them back in if we can. I realize the whole Class A range is blocked at the firewall, but if we could enable the IPs not involved in this latest incident (aka, leave the Class C range suspended) that would be ideal in my estimation. Please advise.

Hi [REDACTED],

So sorry for the long delay here. We are working hard towards our 1/1 launch of current issues and it is mind-numbingly consuming. That is not to say, however, that we haven't been working on our proposed solution. We have the code up on a local development server and are pushing it out to our test servers later this week. I have attached a screenshot of how the notification for MIT affiliated users would look. Please note that the text is just a placeholder at the moment and that we will be able to use HTML to create hyperlink(s), bolding, etc. In any case, we should be ready to move on this shortly and will look to coordinate some testing with you all prior to the live transition. Probably early next week.

At this point, the only code release on our schedule (required to implement this change) is for 12/18. If all testing and goes well, we could be up and running with this solution the following Monday, December 18th or any time thereafter.

Please let me know if additional information would be helpful and know I will be in touch in the beginning of next week to engage in testing with you and to have a look at the desired text and URL, etc.

Best,

Hi [REDACTED], we've not heard anything more about the idea discussed in our phone call of a special landing page on

That sounds terrific. I look forward to discussing possible scenarios and doing some information sharing. I have a project review meeting on Tuesday with my portion concluding at 1:30 -- I should be able to make a 2:00 without issue however, if I run slightly behind, I'll let all know. Enjoy the weekend.

Best,

>

> We would like to try an additional tweak to our normal 'econtrol' process if it is possible on the JSTOR end. If JSTOR could use an Apache mod\_rewrite to redirect any activity from the MIT IP addresses (aside from those for our proxy server) to our proxy server, our patrons would not have to remember to use a special gateway to get to JSTOR. This would be a big benefit to our patrons. Would this be feasible for JSTOR?

>

> When we are ready for the change, we will need you to reduce the authorized MIT IP ranges list you appended below to these:

> 18.51.1.222

> 18.7.29.240

>

> Ultimately only the second address will be needed, but we are in transition from one proxy server to another. If you can implement the server-side configuration change mentioned above, we would currently be redirecting to 18.51.1.222, though we'd have to change to the other address in the next few months.

>

> Please do not make any change yet, as we want to send information to our patrons before the switch so that they will be aware of the changes in the access model. We are preparing the communications now, but we need to know whether JSTOR can implement the apache mod\_rewrite before we finalize those messages, since that information will determine what we have to tell our patrons about access.

>

> I have copied [REDACTED] from our IS&T group here -- if there are technical questions about the Apache mod\_rewrite you will be best served by going direct to [REDACTED]. I have also copied the [REDACTED], as [REDACTED] will be the one making the changes on our end to EZproxy. Those changes will need to precede the changes on JSTOR's end.

>

> In at least partial answer to your inquiry below, we offer guests access to the MIT network. However, once we institute our additional authorization layer for JSTOR, this route will be closed to guests. So we will have closed the pathway through which the excessive use occurred.

>

> I appreciate your response here. It appears we still have a ways to go to reach resolution, but I am glad to assist.

>

> First, this activity is not continuing at the moment. Given that we saw it twice in two weeks, starting on a Saturday, I will hazard a guess that if this does recur, it will begin again on a Saturday. That said, if and when it does recur, we will be denying IP ranges significant enough to prevent it from continuing, while hopefully avoiding the need to block the entire range again. Internally, we are agreed on this point.

>

> Second, we typically follow each case of excessive downloading with a three step process for considering the incident resolved...

>

> 1. Is it continuing? Not at the moment, but the jury is still out and will be for a few weeks.

>

> 2. Did the institution take the necessary steps to prevent recurrence? I see your suggestions here and have some thoughts on it as a follow on conversation. At present however, it is very important for us to understand if the user's password has been changed and if the user has been contacted directly to address this issue. As a guest user, and likely the same user involved previously, using an efficient robot to grab lots of content, this is paramount to solve at the individual user level. If it is a shared account or used by multiple users, this is even more critical.

>

> 3. Was the content acquired deleted? This can be tricky, we understand, but if you can identify the user, in combination with adjusting their credentials, we must request that the best effort be made to insure that the content acquired is deleted from the storage device or web space in which they are storing it.

>

> We can give you very granular log files from our end if identifying the user is problematic, but not identifying the user and assuring that the content is deleted, especially on an incident of this size, is a sizeable barrier to bringing this incident to a close.

>

> As for your suggestion, we would gladly adjust the IPs that have access to JSTOR at your request. Note that some of our very large institutions do authenticate in this way. Also note that most very large institutions that do use proxy servers, use 2 or 3 to meet their bandwidth and access control needs. That said, I want to make sure we are on the same page here. Adjusting your configurations to prevent future occurrences is separate from bringing resolution to this incident.

>

> If your IS&T group need additional information for activities between the time frames already provided, please do let me know what kind of information they are looking for and how much. Like, logs for at least 30 consecutive actions from an MIT IP between the times of 16:00 and 16:30 on Saturday, and we'll be happy to provide them.

---

Hi [REDACTED], we've not heard anything more about the idea discussed in our phone call of a special landing page on the JSTOR end that would redirect users who haven't come through our proxy server. We've been waiting to hear back before taking any action here. But given the passage of time, I'm wondering if we should be moving ahead with adding our layer of authorization without waiting for this page.

Thanks [REDACTED].

I scheduled the meeting for 2-3 pm tomorrow and invited [REDACTED] our [REDACTED], to attend. I have also copied [REDACTED] here. I am thinking that [REDACTED] and I may want to be on the call as well, but really looking to merely facilitate an open discussion between yourself and [REDACTED]. You are more than welcome to extend an invite to others at MIT that might prove helpful in the discussion as well. Looking forward to our conversation.

The dial in number is [REDACTED]

Best,

[REDACTED]

Hi [REDACTED] (and everyone),

That sounds terrific. I look forward to discussing possible scenarios and doing some information sharing. I have a project review meeting on Tuesday with my portion concluding at 1:30 -- I should be able to make a 2:00 without issue however, if I run slightly behind, I'll let all know. Enjoy the weekend.

Best,

[REDACTED]
